CORONERS' BILL.

The Hon'ble Mr. STOKES moved that the Report of the Select Committee on the Bill to empower the Government of Madras to alter the local limits of the Coroner's Jurisdiction, and for other purposes, be taken into consideration. He said that the substance of the Bill as introduced was unaltered, but the Select Committee had taken this opportunity to make certain amendments in the Coroners' Act which experience of its working had shown to be desirable, and which had, for the most part, been brought to their notice by the present Coroner of Madras, Mr. Eardley Norton, the able son of an able and distinguished father.

The first of these was in section 8, which they had altered in such a manner that the Coroner would not be bound to act, as it had been supposed he was at present, on every information he received, but only if he saw reason to

believe that the information was trustworthy.

The Select Committee had, in the next place, amended section 17 so as, first, to empower the Coroner to issue process beyond the local limits of his jurisdiction, and secondly, to remove a doubt which had been felt as to his power to

issue a summons for the production of a document.

Lastly, they had added a clause to section 20, providing that the Coroner should be deemed to be a Magistrate for the purposes of section 26 of the Evidence Act. The effect of this last amendment would be that confessions made before a Coroner would be admissible in evidence, though the persons making them were at the time they made them in the custody of the police. As the Coroner was not a "Magistrate," the effect of the Evidence Act was that, when a prisoner was tried at the sessions, on the Coroner's warrant, a voluntary confession of guilt made at an inquest by that prisoner (while he was in the custody of the police) to the Coroner was inadmissible in evidence. As even Village Munsifs had been held to be Magistrates for the purpose of section 26 of the Evidence Act (I. L. R. 2 Madras 5), it was clear that Coroners should be declared to be Magistrates for the purposes of that section.

The Motion was put and agreed to.

The Hon'ble Mr. Stokes also moved that the Bill as amended be passed. The Motion was put and agreed to.

EXEMPTION FROM MUNICIPAL TAXATION BILL.

The Hon'ble Mr. Colvin moved that the Report of the Select Committee on the Bill to exempt certain persons and property from Municipal taxation

be taken into consideration. His Excellency THE PRESIDENT said that he had looked at the Report of the Committee and was very glad to see the alterations which they had introduced into the Bill as originally introduced. He confessed that it appeared to him that the Bill, as first proposed, gave too extensive powers to the Government of India, and that the amount of uneasiness that was felt on the subject by a considerable number of municipal bodies in the country was justified by the very sweeping character of the clauses of the Bill as at first drawn; and he was very glad that the Select Committee had taken into consideration the representations made by them and had modified the Bill and had removed all reasonable objection to it. His Excellency thought that it was worthy of consideration by Government in the Executive Council, whether it would not be desirable to issue a circular to Local Governments after the Bill had been passed, drawing their attention to the provision and suggesting that they should appoint a person to communicate with the municipalities with a view to settling what Government should pay towards the municipal rates. This was the course followed in England. The right of the Crown on behalf of Crown property to exemption from rates had been maintained, but a sum had been settled in each case which was paid to the municipality in the place of Crown rates; and he could only say that he hoped the Local Governments in dealing rates; and he could only say that he hoped the Local Governments in dealing with the question would deal with it in a considerate spirit, and that, under the particular circumstances of each case, the Government of India would be

made to contribute, in regard to their own property, whatever would be fair and reasonable towards municipal rates.

The Motion was put and agreed to.

The Hon'ble Mr. Colvin also moved that the Bill as amended be passed. The Motion was put and agreed to.

CRIMINAL PROCEDURE CONSOLIDATION BILL.

The Hon'ble Mr. Stokes moved for leave to introduce a Bill to consolidate and amend the law relating to criminal procedure. He said that, notwithstanding the partial consolidation effected in 1872, the Criminal Procedure of British India was now contained in seventeen Regulations and Acts, comprising over 1,050 sections, and in the numerous and sometimes conflicting reported decisions of the four High Courts and the Chief Court of the Panjab. Of these Acts, the chief were the three Codes-Act X of 1872 (the Code of Criminal Procedure), amended by Act XI of 1874, in force in the Mufassal; Act X of 1875, in force in the Presidency High Courts, the High Court at Allahabad and the Chief Court at Lahore; and Act IV of 1877, in force in the Courts of the Presidency Magistrates.

In his despatch (Legislative), No. 44, dated 26th October, 1876, the then Secretary of State for India, referring to the Presidency Magistrates Bill (now Act IV of 1877) and its variations, both in arrangement and phraseology, from the Code of Criminal Procedure, proceeded as follows:-

"This appears to me a wide departure from the settled policy of providing a simple and uniform system of law for India.

"The Draft Code of Criminal Procedure prepared by the Indian Law Commissioners in 1856 was intended by them for use in all the Courts, and although it was not deemed advisable. 1856 was intended by them for use in all the Courts, and although it was not deemed advisable to carry out the whole of this design when the Code of Criminal Procedure was enacted in 1861 for the Mufassal only, I think that circumstances are now more favourable to its completion. In the preparation of the High Courts Original Procedure Act, 1875, and of the present Bill, the whole of the Code of Criminal Procedure has been carefully reviewed and freely amended, and it seems desirable that the Mufassal districts should not continue under a less perfect law than the Presidency-towns, but that they should enjoy the benefit of the latest corrections and improvements; and that whatever rules are intended to be observed by all the Courts although the special duties and procedure of each. This is the best safeguard against conflicting rulines.

rulings.

"I request, therefore, that your Excellency in Council will direct your attention to the question whether the Criminal Procedure Code of 1872 might not now be recast so as to combine with it the substance of the High Courts Act, 1875, and of the present measure, and thus

at length to give to India a complete Code of Criminal Procedure."

Mr. Stokes accordingly proceeded to frame a scheme for a Bill consolidating the Code of Criminal Procedure, the High Courts Criminal Procedure Act, the Presidency Magistrates Act and other enactments relating to Criminal Procedure. The general principles on which it was framed were four-first, that the constitution and powers of the Criminal Courts should be dealt with at the beginning of the Code; secondly, that the rules relating to the prevention of offences should come before the rules relating to their prosecution; thirdly, that all matter of the same kind should be thrown together; and, fourthly, that the proceedings in a prosecution should be treated, as nearly as may be, according to the chronological order of the ordinary events; but that special proceedings and supplementary provisions should be dealt with apart. In this last respect the scheme followed the analogy of the Code of Civil Procedure, and was in accordance with a proposition thus laid down by Sir Fitzjames Stephen when introducing the Bill now Act X of 1872:—"The principle," he said, "on which a Code of Criminal Procedure ought to be arranged was perfectly simple. You would naturally begin at the first steps taken when a crime had been committed or was suspected: you would go on through the various steps from the time when the enquiry was first made till you got to the execution of the sentence of the Court. Exceptional incidents and supplementary arrangements should be separately dealt with. That was the principle on which a Code of Criminal Procedure ought to be framed."

The Government of India approved of this scheme and sent it to the Secretary of State enclosed in their Legislative despatch No. 41, dated 28th

May, 1877.
On the 26th July, 1877, the Secretary of State replied that the scheme had his general approval, and consented that the Council should proceed at Simla with the preparation, and, if this should be completed, with the introduction and publication, of the Bill. Mr. Stokes accordingly framed the Bill consolidating the laws above-mentioned, incorporating the numerous reported judicial decisions on the Code, and thus clearing up many doubtful questions, and making certain other amendments of the law which had from time to time been suggested by the Local Governments and the Home Department. MR. STOKES subsequently revised the Bill carefully with the assistance of Cockerell (then an Additional Member of the Governor General's Council, and a gentleman of large experience in the administration of the criminal law in the Mufassal) and of Mr. Fitzpatrick, the present Secretary in the Legislative Department, who also had had much similar experience, and who re-drew the chapters on Public Nuisances and on Security for keeping the peace. Care was taken to preserve, as far as possible, the language and arrangement of the present Code. But it was necessary for their main purpose—the combination in a compact form of the various laws regulating criminal procedure—to make some changes. The alterations in language were rendered inevitable, partly by the numerous decisions of the High Courts pointing out flaws in the drafting of the present Mufassal Code,—flaws which it would have been absurd to perpetuate,—partly by the orders of the Secretary of State that the Mufassal Courts should have the benefit of the corrections and improvements made in the Codes in force in the Presidency-towns. The alterations in arrangement were necessitated, partly by the fact that the Bill consolidated no less than fourteen different the Presidency-towns. enactments, partly because the principle on which the bulk of the present Code was arranged was not easily ascertainable.

The laborious task of revision occupied Mr. Cockeroll, Mr. Fitzpatrick and Mr. Stokes till April, 1879. The Bill was in many respects improved, but they found themselves unable to make any substantial alteration in an arrangement which seemed to them as clear and logical as the nature of the case could admit MR. STOKES then laid the revised Bill before the Executive Council, and the Bill was sent to the Secretary of State in a despatch dated the 22nd of May, 1879. It was also published in the Gazette under Rule 22 for the conduct of business, and was circulated to the various Local Governments with a

request that it might be examined by selected local officers.

The result of this examination was contained in the thick folio volume A good précis was made of this mass of papers, and, in the autumn of last year, his hon'ble friend Mr. Colvin (who, like Mr. Cockerell, had had large experience in the administration of criminal law), Mr. Fitzpatrick and Mr. Stokes went steadily through it, and revised the Bill with the utmost care. The Bill, even as first published, might truly be described as the work of the whole body of Indian Judges and Magistrates, rather than of any individual or department. Mr. Stokes was, therefore, not liable to the charge of vanity in saying that the drafting and arrangement of the new Bill were generally admitted to be superior to those of the present Code. On this point Mr. Stokes might quote the opinion of Mr. Nelson, a Civil and Sessions Judge in the Madras Civil Service, one of the editors of the present Code, and well known as a somewhat hostile critic of Indian law and its administration:

"I would wish to be permitted to observe, in the first place, that the Bill appears to me to "I would wish to be permitted to observe, in the first place, that the Bill appears to me to be most admirable, and to be likely to provide the country with a criminal procedure that, in theory at least, will leave but little to be desired. Most of the principal faults of the original Code have now disappeared, and, when a few more amendments of substance and language shall have been made, the Act probably will be as good as it can be in the present state of legal knowledge. Fortunately, processual law, whilst of infinitely greater importance to the people at large than substantive law, is many times more easy to make and understand; and a Code of Criminal Procedure would seem to be almost exempt by its very nature from the objections that habitually are raised against codification as often as a benevolent attempt is made to make the people know what they may or may not do, what rights belong to them, what duties are laid upon them. And periodic correction of such a Code, whilst introducing all the improvements that experience can devise, will interfere with no vested interests and injure not a single class of men. It is not unrea

sonable, therefore, to hope for the possession of a thoroughly successful Code of Criminal Procedure, after one or two more revisions shall have been effected.

"It would be difficult to find fault with the main object of this Bill, which is to substitute a single homogeneous Act of 566 sections 'for fourteen enactments containing 1,046 unrepealed sections.' And the general arrangement and division of subjects would seem to be bet little over to attack." but little open to attack."

They found that a large number of suggestions were made for the improvement of the present law, and many of these they had adopted. Objections were, both in substance and form, generally taken to the clauses prescribing a limitation for prosecutions for certain offences, and to the clauses relating to the composition of offences. They felt the force of these objections, and accordingly struck out the clauses relating to limitation, and modified those which dealt with compounding, so that no reasonable opposition could now be made to them.

Furthermore, he must frankly admit that the Governments of Madras, the North-Western Provinces, the Panjáb and British Burma objected to the alteration in arrangement, because, they said, the change would involve the judiciary and police in much trouble before they mastered the new Act. But, as a learned Judge of the Panjáb Chief Court had remarked, this was an objection that almost refuted itself, because it was an argument against change at any time after the provisions of a Code had become familiar. And it seemed to Mr. Stokes that those Governments had not sufficiently considered the necessity of obeying the orders of the Secretary of State and the desirability of consolidating the fourteen laws relating to criminal courts and criminal procedure and of incorporating the rulings of the High Courts on the present Code.

There was, moreover, reason to think that the inconvenience which would result from the passing of the Bill had been greatly exaggerated. Thus, to quote the despatch from the Government of the Central Provinces, dated 24th September, 1879:-

"It will not be very difficult for the Judges, Magistrates and practitioners of the Mufassal to make themselves acquainted with it, especially if it be provided with a good index [this is being prepared], and perhaps also with such a schedule as the Commissioner of Jabalpur proposes at the end of his letter, showing in parallel columns the section of the new Code responding to each section of the present Code." [This has already been prepared and will be found at the end of the Bill.] "And there will be after all but a temporary difficulty, whereas it will probably be a lasting advantage to have the existing law properly codified."

Mr. Plowden, the Judge of the Panjáb Chief Court, to whom he had referred, said :-

"I have seen an objection urged that Police-officers and others will be put to great inconvenience by the re-enactment of the Code with new provisions and re-arrangements. This is an objection that almost refutes itself, because it is an argument against change at any time after the provisions of a Code have become familiar. I am not an advocate of frequent changes in the law; but I think that, if the present appears to the Legislative Council a convenient time for undertaking to consolidate the law of Criminal Procedure, there is no external obsteple at least in the familiarity of the Courts with the existing Code and Act. Y of 1875. stacle, at least in the familiarity of the Courts with the existing Code and Act X of 1875, so far as the Panjab is concerned.

"For my own part I should be glad to see the measure become law without long delay."

And Mr. Justice Thornton, a Judge of the same Court, wrote: -

"In drafting and arrangement the proposed Bill for regulating the procedure of the Courts of criminal jurisdiction is, in my humble judgment, a great improvement upon Act X of 1872; and the inconvenience involved in its substitution for the existing law is, I believe, exaggerated; it will, after all, be only temporary and forgotten in two years."

To the same effect wrote the Judges of the High Court, North-Western Provinces. Thus Mr. Justice Spankie :-

"Without committing myself to the opinion that any total repeal of Act X of 1872 was absolutely required, I however must admit that, when mastered (and practitioners will not find it difficult to master it), the Code will be found to be an improvement in form on the old, it whilst in many respects it removes many doubtful points, making it clear what the law referring to them wells is

ring to them really is.
"The form and arrangement of the Code has, I think, been improved, the different chap-

ters taking better places than they did in Act X of 1872.

"I regret that I have not time to go fully into the Bill. It, however, seems obvious that, so far as simplicity goes, it is advisable to have the different Codes now in operation

incorporated in one Act; and, so far as the law has been amended, it appears to have been amended in a right direction. I understand that there has been some outcry about the Bill, but I confess that I do not see in its provisions any reasonable justification of any such

And Mr. Justice Straight, whose experience as a criminal lawyer entitled him to speak with the highest authority on the subject, said :-

"I quite feel that in a country like this, where the dispensing of justice has so largely to be carried out by officers who have not had any special legal training, and whose magisterial duties are so frequently allied to and mixed up with functions of an administrative character, duties are so frequently allied to and mixed up with functions of an administrative character, it is in the highest degree undesirable to embarrass them by frequent legislative changes in the procedure of the Courts over which they preside. To pursue an opposite course must only entail confusion, perplexity and blundering. But, as far as I am able to judge, I see no reason to apprehend that any such consequences are likely to ensue from the introduction of the proposed Code. So far as actually new provisions are concerned, it can cause no excessive mental strain to Magistrates or Sessions Judges, and they need have no difficulty in mastering the few additional enactments it inaugurates; while, for purposes of convenient and ready reference, the amended arrangement of Parts and Chapters is a very great improvement. The consolidation of procedure of all Courts of criminal jurisdiction into one Act would be a sufficient justification for the proposed Code had it no other recommendations."

It would be seen, when the revised Bill was circulated, that the commencement of the measure had been postponed to 1st January, 1883—ten years from the date on which the present Code came into force. This was five years after the date at which, according to Sir Fitzjames Stephen, the Code should have been re-enacted. "I should say," he wrote in his well-known Minute on the administration of justice in British India, p. 38, "that this process ought to be repeated at least once in every five years for every important Act."

Should the Council agree to the present Motion, Mr. Stokes proposed to avail himself at their next meeting of the Secretary of State's permission to introduce the Bill. He would then re-circulate it for criticism to the various Local Governments, which would, he hoped, consuit the High Courts and the ablest Magistrates and Sessions Judges; but he would not take any further step

in the matter till the Council re-assembled next November.

His Honour THE LIEUTENANT-GOVERNOR said he did not think his hon'ble friend had fully stated all the opinions on the subject which had been received: the opinions of those very much in favour of the proposal for the consolidation of the law had been freely quoted, but he believed that the High Court of Calcutta had very strongly protested against the great inconvenience to the Judges, and especially to Native Magistrates and officials, of having the whole Code entirely upset and re-arranged, just as they had thoroughly learnt the existing Code, and that, if this were done, it would be very difficult for them to find out anything to which they might wish to refer. He thought that sometimes there was an exaggerated idea of the value of symmetry, and, though the present Code was not perfect in its arrangement and was contained in a number of different Acts and amendments, still all officers knew now where to look for what they wanted. There was, no doubt, great force in the objection of the High Court as to the inconvenience which would be felt for many years to come, and all these officers, some of whom were not good English scholars, would have to thoroughly re-learn the whole re-arrangements of the Code. If any one could suppose that the new amended Code would be lasting, these objections might be considered trifling, because the advantage of a re-arrangement made once and for ever would be obvious; but HIS HONOURSAW no more reason to suppose that his hon'ble friend's re-arrangements would be more lasting, or considered by his successors in office to be satisfactory and based upon intelligible principles, than the arrangement of the existing Code by his predecessors was considered to fulfil these requirements by him. He well recollected that at the time the existing Codes were considered by the authors to be perfect. The result would be that patching would go on, year after year, until finally people would not know where to find the law which they had to administer. At the same time His Honour was perfectly prepared to consider the Bill when it came out, and hoped that as little change as possible would be made for the sake of the mere symmetry of the Code.

SUPPLEMENT TO The Gazette of India.

No 11. CALCUTTA, SATURDAY, MARCH 12, 1881.

OFFICIAL PAPERS.

A Supplement to the Gazette of India will be published from time to time, containing such Official Papers and reaction as the Government of India may deem to be of interest to the Public, and such as may usefully be made

known.

Non-Subscribers to the Gazevie may receive the Supplament separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.

No Official Orders or Notifications, the publication of which in the Gazevie or India is required by Law, or which it has been customary to publish in the Calcutta Gazevie, will be included in the Supplement. For such Orders and Notifications the body of the Gazevie must be looked to.

Irrigation.

FINANCIAL ASPECT OF THE GANGES CANAL AND THE ADDITIONAL SUM SANCTIONED FOR THE COMPLETION OF THE SCHEME.

No. 94-61, dated Fort William, 4th March 1881. RESOLUTION-By the Government of India, Public Works Department.

Read the following:-

No. 273 Accounts and Pinance, dated 24th August, 1880.

From-The Government of India, To-The Secretary of State for India.

In his Despatch No. 101 (Public Works), dated 9th December 1873, Lord Cran-

dated 9th December 1873, Lord Cranbrook sanctioned the expenditure of Rs. 85,88,481* upon the completion of the Ganges Caual, making the total cost of the canal, then estimated, Rs. 3,18,83,905, besides the capital value of the land revenue sacrificed by the appropriation of laud for the canal, and the accumulated charges for interest.

2. This great work is now so nearly complete that we are in a position to overnment, the following approximate state. Rs. ... 23,88,898 ... 31,21,847 * Remodelling

^{3.} A careful investigation of the accounts has resulted in an increase of the "Old Outlay" from Rs. 2,32,45,474 to Rs. 2,34,32,747. The accounts of this outlay are now finally

Except under the item "Draininge Works," the provision in the completion estimate for direct outlay has been found sufficient. In the absence of any fixed scheme, the provision for

drainage in the original estimate was believed to be enough for all probable contingencies: but, in 1874, as reported in our Despatch No. 14, dated 12th May 1875, the necessity for works on a more extensive scale became apparent.

4. As the outlay seemed likely to be considerable, we called for a comprehensive report and a classification of the probable expenditure under the following heads:

I.—Imperial Irrigation, namely, the cost of works rendered necessary by the action of the canal, and therefore chargeable to it.

II.—Imperial Ordinary, namely, works of general utility not included in category No. I.

III.—Provincial, namely, works for local drainage.

5. This report showed that of a total contemplated expenditure of Rs. 55,30,681, Rs. 21,25,999 was part of the proper capital cost of the Ganges Canal. Of this sum only Rs. 5,00,000 was provided in the completion estimate sanctioned by Lord Cranbrook: thus an increase of Rs. 16,25,999 will be incurred under this head. The proceedings relating to these enquiries are herewith submitted. There is no increase under any other item of direct

ontlay.

6. Besides the amounts shown in the statement in para. 2, we have sanctioned provisionally, and subject to the confirmation of Her Majesty's Government, a supplementary estimate, amounting to Rs. 6,28,606, for a navigable channel, known as the "Dasna Channel," to connect the Ganges and Agra Camils. The more recent papers regarding this project, which has been long under discussion, are now forwarded. The estimate of Rs. 6,28,606 was prepared in 1877, and will, we

was prepared in 1877, and will, we Rs. * Total net direct cost of the whole canal shown in the statement in para. 2 Daspa Channel believe, now require some modification; in ... 3,33,97.177 the present estimates, therefore, we have 7,50,000 allowed Rs. 7,50,000 for this work. The 3,41,47,177 total amount to which sanction is now solicited is thus, Re. 3,41,47,177.*

7. Of this aggregate net direct outlay, Rs. 2,35,88,793 has been recorded under ordinary heads of expenditure. The remainder has been, or will be, defrayed from grants under the excluded head Productive Public Works.

The expenditure to end of 1878-79, the latest date to which accounts have been recorded, has been-

. 2,35,88,793 Recorded under ordinary heads of expenditure .
Ditto under the excluded head Productive Public Works . 63.87.165 TOTAL

8. Of this amount, the following sums were spent upon the portions of the Cawnpore and Etawah Branches, which have been transferred to the "Lower Ganges Canal Project," as reported to Her Majesty's Government in Despatch No. 92 Public Works, dated 21st August 1870 :-

Ada—Interest	charges	772				To	PAL	50,24.253
Add-Interest	ahawaaa							47,70,053 2,54,200
Direct outlay Indirect								44,05,297 3,64,756

The accounts will be adjusted as soon as the Lower Ganges Canal can supply these branches with water. Including the Dasna Channel, the net direct capital cost of the Ganges Canal will then amount to Rs. 2,97,41,880.

9. The anticipations of the success of this great work, expressed in our Despatch of 1873, have so far been realised. The earnings in 1878-79 were—

26,11,154 6,71,897 TOTAL 32,82,961

and the working expenses Rs. 9,69,908. Thus the net direct revenue amounted to Rs. 16,41,551, being a return of 5.47 per cent, on the capital outlay at the close of the year: the net direct and indirect revenue combined amounted to Rs. 23,13,058, being a return

10	. The areas	irrig	rated	for	the	last	eigh	t years	have	been as	follows	-

[·] Exclusive of area irrigated by new channels, amounting to 26,898 acres

The maximum area commanded by the canal was estimated in 1873 at 1,205,000 acres, which, as the actual result shows, was not far from the mark. The new channels are estimated to irrigate 447,000 acres more.

11. With these remarks, we request the sanction of Her Majesty's Government to the sum of Rs. 3,41,47,177 being accepted as the limit of capital expenditure on the Ganges Canal, in place of Rs. 3,18,33,905 as now sanctioned.

No. 5 P. W., dated 20th January 1881. From-The Secretary of State for India, To -The Government of India.

I have read with interest and satisfaction, and have considered in Council, your Financial letter and its enclosures, No. 273, dated 24th August last, regarding the Ganges Canal.

2. The increased outlay on works since the capital expenditure of Rs. 3,18,33,905 was sanctioned in 1873 by the Duke of Argyll appears to have been fully justified, and I give my assent to the additional sum of Rs. 23,13,272 required for completion of drainage operations and for the construction of the Dasna Canal as a navigable channel to connect the Ganges and Agra Canals, this last sub-project being estimated to cost Rs. 7,50,000.

3. The capital sum expended on the canal, including the value of land revenue sacrificed, and of the estimated cost in connection with the work, of leave and pension allowances, will then amount to Rs. 3,67,34,945; but of this an amount of Rs. 47,70,053 will have been expended on works which attach to the separate and still incomplete project of the Lower Ganges Canal, and the capital cost of the Ganges Canal proper, including the Dasna channels, will amount to Rs. 3,19,64,892.

4. The net revenue, direct and indirect, from the Ganges Canal for the year 1878-79 amounted to Rs. 23,13,058, affording a return of 7.23 per cent.

upon this capital.

5. The book charge for interest on the capital expended, which accumulated before the revenue of the canal sufficed to cover expenses, stands now at Rs. 92,78,213. Allowing an interest of 41 per cent. to be due on the capital cost, the continuance of the present amount of net revenue, without enhancement, for 10½ years longer, will, besides paying that interest, entirely wipe out this debt.

6. The publication of these facts should sufficiently refute the opinions sometimes hazarded in disparagement of the financial success of this great

The original suggestion of a canal from the Ganges was due to the late Colonel John Colvin, of the Bengal Engineers, but the idea was not taken up practically till the famine in Northern India during the years 1837-38 forcibly drew attention to the importance and value of such works, as exemplified by the results of the canals from the Jumna. The scheme was worked out by the late Sir Proby Cautley, who must always hold the first place in the history of this work, and with the sanction of the Court of Directors it was commenced in 1842, when Mr. Thomason, whose support largely contributed by the appropriate of the project was Lieutenant Courtney of the North buted to the acceptance of the project, was Lieutenant-Governor of the North-West Provinces. Several of the ablest Engineer Officers of the Indian Service were, during the years of its construction, connected with the Ganges Canal, notably General Sir W. E. Baker, the late Colonel B. Baird Smith, and the late Colonel A. D. Turnbull. The project has undergone various modifications and amplifications, and has had to pass through formidable difficulties and appropriate interventions till at length the work has reached its present state. occasional interruptions till at length the work has reached its present state of efficiency.

8. I find that the entire length of the canal, including branches, is 627 miles, that the length of the distributary channels amounts to 3,538 miles, and that the area over which irrigation has up to the present time extended amounts to 1,182,330 acres. It is difficult to over-estimate the importance of such an instrument in securing harvests, in improving the agriculture, and in

promoting the prosperity of the provinces through which it runs; whilst with a continuance of good management we may confidently look for a yet wider spread of its benefits, and for a considerable and growing addition, through its action, to the revenues of the State. In every aspect this great undertaking has proved worthy of the genius that conceived it, as well as of the devoted patience and industry which have been bestowed upon its construction, and the intelligence which has marked its subsequent management.

- 9 Among the additions to the original project found necessary, were, as the papers forwarded show, extensive works for the drainage of tracts through which the canal and its branches run.
- 10. I especially desire that the periodical reports of the Irrigation Department should show, in a condensed statement, what results have been attained by these drainage works, in the reduction of water level in saturated soil, in the diminution of that saline efflorescence which has been attributed to the action of the canal water in low lands, and in the improvement of local health.

ORDER.—Ordered, that a copy of these Despatches be forwarded, in continuation of Public Works Department letter No. 205 I. of the 10th July last, to the Government of the North-Western Provinces and Oudh, with the suggestion that the papers be published in the local Gazette, and with the request that the information called for in para. 10 of the Secretary of State's Despatch may be given in the Annual Revenue Reports of Irrigation.

Also that a copy of these Despatches be forwarded to the Publisher, Gazette of India, for publication in the Gazette Supplement.

Also that a copy of the Despatch from the Secretary of State be forwarded to the Department of Finance and Commerce for information.

J. CROFTON, Major-Genl., R. E., Depy. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 8th MARCH 1881.

General Remarks.—More or less rain, accompanied in some instances by hail, has fallen in most parts of the Bengal Presidency during the week; but excepting in Sind, there has been rain nowhere in the Bombay or Madras Presidency. The crops have suffered in some few places from hail, and in other places the want of rain continues to be felt, but on the whole the agricultural prospects of the country are promising. Fever has been reported in many parts of the Bombay Presidency, cholera and small-pox in Burma, and cattle disease in epidemic form in Assam. Otherwise the public health has been generally good.

Presidency or Province District.	and	Rainfall for week preceding.	State of agricultural prospects.
Madras-(Mar. 9th)		
Bellury	•••	**1	Standing crops generally good; harvest dry crops, yield average; paddy and sugarcane being sown; fever in parts.
Kurnool		+==	Harvest cotton, yield average; fever declining; cattle disease in parts; fodder and water procurable.
Ganjam		44.	Standing crops, wet and dry, flourishing.
Kistus		***	Standing crops generally good; harvest dry grains and pulses.
Chingleput (Madras)	***	4.54	Crops generally good; harvest puldy and other crops outturn below average; fovor, small-pox and cuttle disease in parts.
Coimbatore	P47	0 = +	Crops generally good; harvest paddy and dry crops, yield about average; fever in parts.
Tanjore		111	Crops generally good; harvest paddy and dry crops, yield below
			average.
Madura			Harvest paddy, outturn average.
Malubar		4 8 7	Ground being prepared for first crop, new season; small-pox in parts
Travaucore		***	Harvest over; fever prevalent. General Remarks.—No minful anywhere during the week; general prospects good.
Bombay-(Mar. 9th	h)		
Kurrachee	***	30 in Belo:	Wheat crops benefited; river at Kotri on 4th, 1 foot 4 inches
		'41 in Mir-	against 27 feet on same date last year; small-pox in Kurrachee and
		pur Batoro; slight gene- ral min throughout district.	Sakro, one fresh case in former; measles in 3 talukas; feve generally prevalent; early sown rabi crops being harvested in places; wheat red rice and bajrs in Manjhand 9½, 15 and 17 seers in Kurrachee 10, 16 and 16, in Shahbandar 8, 19 and 19, and ir Schwan 12, 15 and 16½ respectively.
Hyderabad	• • •	General rain in 7 taluk- as; '25 (a v e rage	Fever continues in 5 and small-pox in 6 talukas; weather seasonable wheat, bajri, jowari, red rice and white rice 11, 19, 18, 13; and 8; seers respectively per rupee.
Ahmedabad		fall.)	Rabi harvest going on; change of weather for the better; public
Baroda	417	4.00	health good; wheat 37 and bajri 56 lbs. Rabi crops doing well and ready for harvest; public health good;
Daroda	***	+60	45 fatal cases of fever in Baroda city; mouth disease among cattle in the Sidhpur and Degham talukas of the Karri division; bajri 48 and rice 27 lbs, per rupee.
Surat			Robi harvest progressing; fever in 3 talukas; jowari 50 and sagli 52 lbs.
Násik	464	4 0 0	Rabi reaping completed in places; public health generally good;
Coluba (Bombay)	494	a 0 •	Abnormal temperature 3° warm on 2nd and 3rd, nil on 4th and 5th; 2° warm on 6th and 1° warm on 7th and 8th; vapour in air in excess of normal on 2nd, 3rd, 6th and 8th, and in defect of normal on all other days; abnormal wind southerly on 6th, nil on all other days.
Poona		404	Average prices—bajri 44 and jowari 61 lbs., in Poons bajri 41 and jowari 52 lbs. reaning of crops almost completed.
Ahmednagar	464		Harvesting nearly finished; ague in Karjat; bujri, maximum 70 lbe. in Sheogaon, minimum 48 in Kopergaon; josoari, maximum 90 in Shrigonda, minimum 64 in Parner.
Sholapore		4 5 5	Rabi harvest continues; cattle disease in parts of Sholspore and Malsirus talukus; ionuri 76-7 and bajri 61-9 lbs.
Dharwar	***	***	Wheat 425 and jowari 96! lbs.; wheat and grain crops harvested; late jowari good; cotton-picking commenced; fever in 7 and cattle discusse in A tableton.
Kanara	• • •	A = 6	Second crop rice plants on coast in ear, plants thriving above Ghat; foot disease among cattle and fever provails in 4 talukas; commor rice in Karwar 15 in district average 162 seers.
Rajkot	981	•••	Weather cool; health generally good; measles and fever prevalent in some parts; bajri 42 and jouani 50 lbs. General Remarks.—Slight rain in Sind; prices tend downwards everywhere; fever in many parts of the presidency.

C. GRANT,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 AND 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 4th March, 1881

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., presiding.

His Honour the Lieutenant-Governor of Bengal, K.C.S.I.

His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E. The Hon'ble Whitley Stokes, C.S.I.

The Hon'ble Rivers Thompson, c.s.I.

The Hon'ble J. Gibbs, c.s.i.

Lieutenant-General the Hon'ble Sir D. M. Stewart, G.C.B.

Major the Hon'ble E. Baring, R.A., C.S.I.

The Hon'ble C. Grant.
The Hon'ble J. Pitt Kennedy.

The Hon'ble H. J. Reynolds. The Hon'ble G. F. Mewburn.

The Hon'ble Mahárájá Jotindra Mohan Tagore, c.s.r.

CRIMINAL PROCEDURE CONSOLIDATION BILL.

The Hon'ble MR. STOKES introduced the Bill to consolidate and amend the law relating to Criminal Procedure, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Thompson, Gibbs, Paul and Reynolds and the Hon'ble Mahárájá Jotíndra Mohan Tagore and the Mover. He said that, when he had obtained leave to introduce the Bill, he had stated that no less than three Codes of Criminal Procedure were now in operation in British India—Act X of 1872, amended by Act XI of 1874, which was in force throughout the Mufassal; the High Courts' Act, X of 1875, which was in force in the Presidency-towns, Allahabad and Lahore; and the Presidency Magistrates' Act, IV of 1877, also in force in the Presidency-towns.

Many of the provisions of these Codes merely repeated one another; many of their rules, though dealing with the same subjects, unnecessarily varied in language; and the result was that the bulk of the Indian Statute-book was far greater than was needed, and that the Courts, when construing one Code, were

often deprived of the guidance of prior decisions on another.

The primary object of the Bill, which had been framed at the suggestion of Lord Salisbury when Secretary of State for India, was to recast the Code of 1872, combining with it the substance of the High Courts' Act and the Presidency Magistrates' Act, and incorporating in it the numerous reported decisions on its wording, and thus at last give to India a single and complete Code of Criminal Procedure, and carry out, so far, the policy of providing a simple and uniform system of law for this country. The language and arrangement of Act X of 1872 had, for obvious reasons, been departed from only so far as was necessary for the main purpose of the Bill. Nothing had been altered save what could be clearly shown to be defective or inconsistent with other parts of

Though many of the outlying Acts and Regulations dealing with criminal procedure were repealed and re-enacted by Act X of 1872, many more were still untouched, and the secondary object of the present Bill was to consolidate

these enactments, which were twelve in number :

XXIII of 1840 (Execution of process). XXXIV of 1850 (State-Prisoners).

III of 1858 (State-Prisoners). V of 1861, sections 6, 24, 37 to 40 inclusive, part of section 35 (Police). XVIII of 1862 (Administration of Criminal Justice in the High Courts). II of 1869 (Justices of the Peace).

XXII of 1870, sections 2 and 4 (Application to European British subjects of Acts giving summary jurisdiction).

XXI of 1879, Chapter III (Inquiries in British India into crimes committed abroad by British subjects).

Regulations.

Bengal Regulation III, 1818 (State-Prisoners).
Bengal Regulation XX, 1825 (Jurisdiction of Courts Martial).
Madras Regulation II, 1819 (State-Prisoners).
Bombay Regulation XXV, 1827 (State-Prisoners).
The result of consolidating the Astronomy III and the Astronomy III.

The result of consolidating the Acts and Regulations above specified would be to substitute a single Act of 568 sections for fifteen enactments containing

1,055 unrepealed sections.

The opportunity had been taken to make no less than one hundred and twelve amendments of the substance of the law. These were carefully described in the Statement of Objects and Reasons, and on the present occasion he would confine himself to mentioning and explaining a few of the more important. He must, however, observe, on the threshold, that the present Bill was divided into nine Parts-the first containing the usual preliminary matter; the second dealing with the constitution and powers of the criminal Courts and offices; the third containing some general provisions; the fourth treating of the prevention of offences; the fifth, of information to the police and of their powers to investigate; the sixth, of proceedings in prosecutions; the seventh, of appeal, reference and revision; the eighth, of special proceedings; the ninth, of supple-

mentary provisions.

Part I consisted of a single chapter containing the usual preliminary matter. The wording of some of the definitions in Act X of 1872, which defined phrases that did not occur in the Act, had been amended, and definitions of "to sign," "public prosecutor," "pleader," "offence," "chapter," "schedule," "place," and "police-station" had been added. The definition of "investigation" had been extended so as to comprise the proceedings of persons authorized by a Magistrate to make local investigations. The definition of "cognizable offence" had been amended so as to connect it with the third column of the second schedule, which stated "whether the police might arrest without warrant or not." As the law stood in Act X of 1872, the definition of "cognizable offence" and section 92, clause 1, really gave no information on the subject for that column was nowhere connected with the formation on the subject, for that column was nowhere connected with the This defect had in one case, of which MR. STOKES had been informed by Mr. Arthur Macpherson, and probably in others, caused considerable difficulty. A clause had been added to the definition of "High Court" so as to enable the Governor General in Council to appoint in outlying territories, where no such Court was established by law, an officer to perform its functions under the Code.

Part II—as to the constitution and powers of the criminal Courts and offices—consisted of two chapters, of which the first dealt with the classes of criminal Courts, territorial divisions, Courts outside the Presidency-towns, the Courts of the Presidency Magistrates, Justices of the Peace, and the suspension and removal of Judges, Magistrates and Justices of the Peace, and the suspension and removal of Judges, Magistrates and Justices of the Peace. The provisions of the Police Act (V of 1861), section 6, had been incorporated in this chapter, section 14. The Local Government had been empowered (section 16) to make rules for the guidance of Magistrates' Benches. This would result in uniformity of practice wherever such uniformity was desirable. Assented to the Section 17) subording to the Section 18. sistant Sessions Judges had been declared (section 17) subordinate to the Sessions Judge in whose Court they would exercise jurisdiction. This would preclude

a doubt which had been raised on the subject. The second chapter treated of the powers of Judges and Magistrates, the description of offences cognizable by each Court, the sentences which might be passed by Courts of various classes, and the mode of conferring powers on the

Magistrates of the first class were forbidden (section 29) to try offences under special or local laws which were punishable with imprisonment for more than seven years: such grave cases should be tried by a higher Court. All Magistrates of the first and second classes, and all Magistrates of the third class when specially empowered, were to have the powers of an officer in charge of a police-station (section 38). It was desirable that the police powers which Magistrates could exercise in investigating offences should be clearly defined, which certainly was not the case at present. In section 40 (= Act X of 1872, section 56), as to the continuance of powers of an officer transferred to another local area, words had been introduced to shew that powers conferred by one Local Government did not accompany an officer when he was transferred to a province under another Local Government. A different view had been taken in

Assam and, possibly, elsewhere.

Part III contained certain general provisions which it seemed convenient to group together, and which, to avoid forward references, must stand near the beginning of the Code. They related to the following matters:—aid and information to the Magistrates, the police and persons making arrests; arrest, escape and retaking; processes to compel appearance and production of documents, and processes for the discovery of persons wrongfully confined. Here, again, the changes in the law were little more than verbal. But some useful Thus, to the offences which amendments in substance had been made. the public were bound to assist in preventing had been added (section 42) attempts to injure public property, railways and canals; the public (section 42) must assist in cases of fire dangerous to human life or valuable property; the section (45) requiring village-headmen, &c., to report had been extended to escaped convicts and proclaimed offenders, and (to provide for villages in hill-passes through which bands of dacoits habitually proceeded) also to cases where the criminal merely went through the village: the section (46) which authorized, in the case of forcible resistance, the use of necessary means to effect arrests, had been extended to meet the case of attempts to evade them: power had been given (section 49) to break open the doors of a house for the purpose of liberating persons who had lawfully entered for the purpose of making arrests therein: persons making arrests had been expressly empowered (section 53) to take from the person arrested any offensive weapons which he might have about him: the police had been authorized (section 5.1) to arrest, without warrant, deserters from the Navy; and sections (66, 67) equivalent to Act XXV of 1861, section 112, had been inserted to provide for the retaking of persons escaping or rescued from lawful custody.

Nothing in the whole course of criminal procedure was so productive of vexatious proceedings and serious consequences as arrests. The utmost care, therefore, had been taken in framing the sections on this subject so as to make them clear and precise. Thus, the wording of section 178 of the present Code, which empowered the police to use "all means necessary to effect the arrest" of a person forcibly resisting or attempting to escape, appeared dangerously wide. It might, conceivably, be held to justify the killing of any runaway criminal. The Bill, therefore, explained that this power did not give the right to cause the death of an arrested person who was not accused of a capital offence. The Bill here followed the law of Scotland, which, in Mr. Mayne's opinion (Commentaries on the Indian Penal Code, s. 106) was in India the

safer rule.

Sub-divisional Magistrates (as the Bill called "Magistrates of divisions of districts") had been empowered (section 78) to direct warrants to landholders, &c., for the arrest of escaped convicts. This extension was in harmony with the large powers generally possessed by Magistrates in charge of sub-divisions. The present Code did not provide how attachment of debts and other

moveable property of proclaimed persons was to be effected. Provision had, therefore, been made (section 89) for this purpose; and the powers, duties and liabilities of receivers had been declared by reference to the Code of Civil Procedure.

Under the Bill (section 95) a person required merely to produce a document would (as under the Civil Procedure Code, section 164) be deemed to have complied with the requisition if he caused the document to be produced instead of attending personally to produce it. This amendment of the law would obviously tend to save time and expense, and thus diminish the unpopularity of our Courts.

Provision was made (section 104) for making a list (signed by witnesses) of things found in execution of a search-warrant beyond the jurisdiction of the Court issuing it. The necessity of obtaining the signature of the witnesses would be of use as a check upon the irregularities which, it was said, sometimes

occurred in the course of searches.

A clause (section 101) had been inserted giving Presidency Magistrates, Magistrates of the first class, and Sub-divisional Magistrates power to issue warrants to search for persons wrongfully confined. No such power, though needed, was supposed to exist in India, except, of course, in the Presidencytowns, where the High Courts issued, under Act X of 1875, directions of the

nature of a habeas corpus.

Part IV. which related to the prevention of inchoate offences, and arresting the course of such as were in operation, came, it was considered, properly before Part VI, which related to their presecution when already committed. This was the order followed by Edward Livingston, the eminent jurist, in preparing his system of penal law for the State of Louisiana. The Bill, as now framed, dealt merely with the mode of preventing apprehended offences by the intervention of the officers of justice. Prevention by resistance was, it was thought by many of the authorities to whom the first draft of the Bill had been submitted, sufficiently dealt with by the sections of the Penal Code relating to the right of private defence. This Part comprised six chapters, dealing, respectively, with security for keeping the peace and for good behaviour; the dispersion of unlawful assemblies; suppression of nuisances; disputes as to immoveable property; and, lastly, the preventive action of the police. Under a similar heading, "Preventive jurisdiction of Magistrates," the present Code contained a chapter (XLI) relating to the maintenance of wives and families; but Mr. Stokes thought that this subject (if it came at all into a Code of Criminal Procedure) would be more fitly placed in a Part dealing with special proceedings, and the Council would accordingly find it in Part VIII of the Bill.

In the chapter relating to security for keeping the peace and for good behaviour, the section (107) dealing with security for keeping the peace and for good behaviour, the section (107) dealing with security for keeping the peace and conviction had been extended to cases in which the accused was convicted of

In the chapter relating to security for keeping the peace and for good behaviour, the section (107) dealing with security for keeping the peace on conviction had been extended to cases in which the accused was convicted of criminal intimidation by threatening injury to person or property. This was an offence of the same nature as taking unlawful measures with the intention of committing a breach of the peace, and should, therefore, as regards the taking of security, be placed on the same footing. When the conviction was set aside on appeal or otherwise, the bond would become void. On this the

present law was silent.

In section 111 (= sections 505, 506 of the present Code) the words which gave the Magistrate power to demand security from persons of "notoriously bad livelihood" or of "a dangerous character" had been omitted. It had been objected that these words were vague, and that the authority which they placed in the hands of the Police was liable to great abuse.

The Magistrate was empowered (section 133) to make an order as to the character and class of the sureties required. This, it was hoped, would prevent certain persons making a trade of becoming sureties. The object of the law (as would be seen from section 399 of the present Code) was not merely to provide a money-security, but also to obtain respectable persons as 'guarantees for the good behaviour of the criminal concerned.

The Bill contained no provision corresponding to section 499 of the present Code, which authorised a Magistrate, with the sanction of the Court of Session, to extend the time for which a person had been bound to keep the peace. If, before the expiration of the term of the original bond, it appeared to the Magistrate unsafe to release the obligor at the end of that term, in justice to the obligor fresh proceedings should be instituted.

Chapter (IX) on dispersion of unlawful assemblies contained the rules for calling out and employing the military, in aid of the civil, power. Here, the only substantial change made by the Bill was that volunteers enrolled under the

Indian Volunteers Act, 1869, were placed on the same footing as soldiers of Her Majesty's Army.

As to the Magistrate's powers to abate public nuisances, chapter X, section 134, corresponding with section 521 of the present Code, had been extended to cases of keeping goods or merchandise (for example, damaged rice) injurious to the public health, and of carrying on occupations offensive to the religious feelings of any considerable section of the community. The latter extension was intended to meet such cases as that of a butcher exercising his trade in a Hindú town, so as to cause risk of breach of the peace.

The power to issue injunctions, conferred on Magistrates by section 518 of the present Code, was intended to be exercised only in urgent cases where a speedy remedy was desirable. The Bill (section 145) provided that no such orders should remain in force for more than two months, unless, in case of danger to human life, health or safety, or a riot or affray, the Local Government directed otherwise. Where time allowed, the procedure must be under

Part V consisted of a single chapter relating to information to the police and their power to investigate. It corresponded with chapter X of Act X of 1872, and sections 379 and 380 of the same Act. The words "or that immediate arrest is not necessary," which were to be found in section 117 of Act X of 1872, had been omitted from section 158 of the Bill, as it was not apparent why a Police-officer should be debarred from investigating a case of a cognizable offence because he did not at starting feel himself justified in arresting any person.

Section 165 made it clear that confessions to Magistrates should not only be "taken," but signed and certified, like examinations of accused persons. In the form of memorandum relating to confessions, words had been introduced to show that the confession was taken in the Magistrate's presence and hearing, and that it contained a full and true account of the statement.

In the sections (166 and 167) which dealt with searches by the police, and which corresponded with sections 379, 380 of the present Code, amendments had been introduced to meet difficulties which had arisen in practice. Section 168 (= Act X of 1872, section 124, paragraphs 2, 3 and 4), as to the procedure where an investigation could not be completed within twenty-four hours, had also been amended. On the one hand, there was strong objection to allowing an accused person to be detained at a police-station longer than was necessary, and, on the other, to insist on his being forwarded to the Magistrate, when his presence on the spot might be indispensable for tracking out crime or recovering property, might be a serious impediment to justice. Under proper. precautions, the retention of the accused for sufficient reasons would, as now, be allowed, but the period of detention had been limited to fifteen days on the

Part VI treated of proceedings in prosecutions up to appeal, and was divided into sixteen chapters, arranged as follows:-

XV. Jurisdiction of Criminal Courts in Inquiries and Trials.

XVI. Complaints to Magistrates.

XVII. Commencement of Proceedings before Magistrates.

XVIII. Inquiry into cases triable by the Court of Session or High Court.
XIX. The Charge.

XX. Trial of Summons-cases by Magistrates. XXI. Trial of Warrant-cases by Magistrates.

XXII. Summary Trials.

XXIII. Trials before High Courts and Courts of Session. XXIV. General Provisions as to Inquiries and Trials.

XXV. Evidence.

XXVI. The Judgment. • XXVII. Submission of Sentences for Confirmation.

XXVIII. Execution.

XXIX. Suspensions, Remissions and Commutations of Sentences.

XXX. Previous Acquittals or Convictions.

The Council would see that the above-mentioned chapters were arranged, as nearly as might be, according to the chronological order of the ordinary

events in a prosecution.

Chapter XV (as to the jurisdiction of the Courts in inquiries and trials) dealt, first, with the place of inquiry or trial: and, secondly, with the conditions requisite for the initiation of proceedings, such as the receipt of a complaint, a police-report, the receipt of information from private persons, commitment by Magistrates, and sanction by Courts, public servants or the Government.

Sections 9 and 10 of the Foreign Jurisdiction Act (XXI of 1879), which dealt respectively with the liability of British subjects for offences committed out of British India, and with the reception in evidence of depositions made before Political Agents, had been transferred to this part of the Code (sections

189 and 190), which was obviously their proper place.

To the provisions contained in the existing law regarding the transfer of cases, there had been added a clause providing that, when any Magistrate of the first class, specially empowered in this behalf by the Magistrate of a distriet, had taken cognizance of any case, he might transfer it for inquiry or trial to any other competent Magistrate in such district. This would enable such Magistrates to distribute the work in their Courts, when it was necessary

to do so, with less delay than at present.

In Chapter XVIII, of inquiry into cases triable by the Court of Session or High Court, power was given (section 210) to the Magistrate to discharge the accused at any stage of the case if, for reasons to be recorded, the Magis-

trate considered the charge to be groundless.

Chapter XIX, of the charge, i. e., the written accusation of an offence, instead of being placed, as in the present Code, after the chapters relating to trials, appeals and execution, would be found where one would naturally look for it, namely, between the rules as to inquiries and the rules as to trials. There could not, obviously, be a prosecution until the person who had suffered by the offence or knew that it had been committed, accused the offender. This chapter extended to the whole of British India the amendments in Act X of 1872, sections 439 to 459, made by Act X of 1875; and, with reference to Mr. Justice West's observation in Reg. v. Chand Hur, 11 Bom. 241, on the corresponding section (457) of Act X of 1872, section 239 of the Bill had been confined to offences consisting of several particulars, a combination of

some only of which constituted a complete minor offence.

From the section (236) relating to joinder of charges, corresponding with section 454 of the present Code, had been omitted all provisions as to the amount of punishment. They obviously belonged to substantive law, not to procedure, and would find their proper place in the Penal Code. The illustrations had also been amended. Some of them, as they stood in the present Code, were inaccurately worded: others did not illustrate the paragraph to which

they were made to refer.

Provision had been made in section 239 for the case where a person charged with an offence proved circumstances which reduced it to a minor offence. He might then be convicted of the minor offence, though he was

not charged with it.

Chapter XX dealt with the trial of summons-cases. To the section (251) which related to frivolous and vexatious complaints a clause had been added providing that, when awarding compensation in any subsequent civil suit relating to the same matter, the Court should take into account any sum paid or recovered as compensation under this section. A similar provision, when compensation had been given out of a fine, was contained in section 308 of the present Code.

In Chapter XXI, as to trials of warrant-cases, as in Chapter XVIII, had been inserted a clause (section 254) authorizing the Magistrate to discharge the accused at any stage of the case if, for reasons to be recorded, the Magistrate considered the charge to be groundless. As the law stood (Act X of 1872, section 215), no matter how groundless the charge might be, the Magistrate was compelled, before discharging the accused, to take the evidence of the complainant and of all the witnesses whom the prosecution might bring forward.

The provision (Act X of 1872, section 218) that the accused should, while making his defence, he allowed to recall and cross-examine the witnesses for the prosecution, had been expressly confined by the Bill (section 257) to cases where the witnesses were present in the Court or its precincts. The unrestricted power conferred by the present Code, to recall witnesses for the prosecution after they had left the Court, was said to be often abused for the purpose

of harassment and delay.

In Chapter XXII, as to summary trials, the Local Government had been authorized to confer on Benches invested with second or third class powers jurisdiction to try abetments of, and attempts to commit, the offences which they might now try summarily. The omission in section 225 of the present Code to provide for these abetments and attempts was obviously per incuriam. The offences of retaining stolen property not exceeding Rs. 50 in value, and assisting in the concealment or disposal of stolen property not exceeding Rs. 50 in value, had been added to the list of those triable in a summary way; and the offence of receiving stolen property would not be so triable where its value exceeded that amount.

Chapter XXIV contained some general provisions as to inquiries and trials. Here, at the instance of many authorities consulted, the power of tendering conditional pardons to accomplices, which was now exercisable only in cases triable by the Sessions Court, had been extended (section 337) to all warrant-cases. This change was an important one, and further opinions on

its propriety were desirable.

The power to examine the accused given by section 250 of the present Code had been modified by the omission of the words "and shall question him generally on the case after the witnesses for the prosecution have been examined."

HIS HONOUR THE LIEUTENANT-GOVERNOR asked which was the correspond-

ing section of the Bill i

The Hon'ble Mr. Stokes replied that His Honour would find it at once by turning to the table at the end of the Bill, showing the corresponding sec-*tion-numbers. It was 342.

Mr. Stokes would like to have gone further and expressly provided, in accordance with two decisions of the Calcutta High Court, that by exercising the power in question the Sessions Court was not to establish a Court of inquisition, and to force a prisoner to convict himself by making some criminating admissions, after a series of searching questions the exact effect of which he might not readily comprehend. The real object was to enable a Judge to ascertain from time to time from a prisoner, particularly if he was undefended, what explanation he might desire to offer regarding any fact stated by a witness; or after the close of the case, how he could meet what the Judge might consider damnatory evidence against him (I. L. R. 6 Cal. 102). In deference to the contrary opinions of the two gentlemen, Mr. Cockerell and Mr. Colvin, who had so loyally helped him in the revision of the Code, he had abstained from making any provision on the subject; but he would certainly bring the matter to the notice of the Select Committee to which he trusted the Bill would be referred. He would take the present opportunity of quoting what Mr. Livingston had written on this subject :-

An unrestrained right of interrogating is also very apt to produce insidious and catching questions. Instead of a cool and importial attempt to extract the truth, the examination becomes a contest, in which the pride and ingenuity of the Magistrate are arrayed against the caution or evasions of the accused, and every construction will be given to his answers that may fix upon him the imputation of guilt."

MR. STOKES would leave this part of the Bill with the remark that the power to interrogate accused persons, given by the section in Act X of 1875, corresponding with section 250 of the present Code, had, according to his hon'ble and learned friend the Advocate General of Bengal, never been used by the High Court at Fort William in the exercise of its original criminal jurisdiction.

Much doubt existed as to the offences which might lawfully be compounded. The Exception to section 214 of the Penal Code (in which the law on the subject was contained) was excessively obscure, for it could seldom be said of any act that it was an offence "irrespective of the intention of the offender," and this obscurity was increased, rather than diminished, by the illustrations annexed to that section, two of which gave the case of an assault, though the definition of that term in section 351 made the offence depend on the intention. The Bill repealed these illustrations; and section 345 declared in unmistakeable language that certain specified offences, and no others, might be compounded. These were—

Causing hurt (Penal Code, sections 323, 384, 337, 338).

Wrongfully restraining or confining (Penal Code, sections 341, 342).

Assault or use of criminal force (Penal Code, sections 352, 358).

Unlawful compulsory labour (Penal Code, section 374).

Mischief, when the loss or damage was caused to a private person (Penal Code, sections 426, 427).

Criminal trespass and house-trespass (Penal Code, sections 447, 448).

Criminal breach of contract of service (Penal Code, sections 490, 491, 492). Adultery, and enticing, &c., a married woman (Penal Code, sections 497, 498).

Defamation (Penal Code, section 500).

Printing or engraving defamatory matter (Penal Code, section 501).

Sale of printed or engraved substance containing defamatory matter (Penal Code, section 502).

Insult intended to provoke a breach of the peace (Penal Code, section 504). Criminal intimidation, except when the offence was punishable with imprisonment for seven years (Penal Code, section 506).

The offences of voluntarily causing hurt, voluntarily causing grievous hurt, and cheating, punishable under the Indian Penal Code, sections 324, 335 and 417, would be compoundable with the permission of the Court, and by the person to whom the hurt had been caused, or by the person cheated, as the case might be.

The power of the Government to commute punishment (section 402) had been so worded as to authorize a sentence of rigorous, to be commuted to one of simple, imprisonment. This was not, apparently, possible under section 322 of the present Code, where the law on the subject was now to be found.

Part VII dealt with appeals, references and the revisional jurisdiction of

the High Court.

The power to appeal in criminal cases was liberally bestowed by the present law, and only two new cases had been provided for by the Bill. An appeal had been given (section 405) from orders rejecting applications for delivery of attached property. An appeal had also been given from convictions in contempt-cases by Courts of Small Causes in the Presidency-towns.

Section 408 provided that the appeal from a District Magistrate exercising the enhanced powers conferred under section 34 (= section 36 of the present Code) should lie to the Court of Session in cases in which the sentence had not been submitted to that Court for confirmation, and, when it had been so submitted, to the High Court. This put the appeals in question on the same footing as appeals from an Assistant Sessions Judge. There seemed to be

no reason for making any distinction between the two.

Section 423, in accordance with a decision of the Madras High Court (I. L. R. 1 Mad. 54), declared that, when an Appellate Court enhanced any punishment inflicted by the sentence appealed against, it might inflict punishment of a different kind. Personally, Mr. Stokes, in common, he believed, with most Indian lawyers, was averse to the power of enhancing punishments which the present Code (section 280) gave to the Appellate Courts. Its existence tended to deter convicted, but, possibly, innocent, persons from presenting appeals, and thus to deprive the lower Courts of the control which could only be effectively exercised over them by means of an unhampered system of appeal. This matter, as well as the power to examine accused persons, he hoped to bring to the special notice of the Select Committee.

In the case of an appeal from an acquittal, section 427 expressly authorized the High Court to order the accused to be arrested and brought before it, and to commit him to prison pending the disposal of the appeal, or admit him

In the absence of this power cases had occurred in which criminals, afraid of the result of the appeal, escaped, and made the appeal on behalf of the Government of no avail.

A section (431) suggested by a decision of the Bombay High Court (I. L. R. 2 Bom. 564) provided that appeals by persons required to give security for good behaviour, or by convicted persons, should abate on their death, and that appeals against acquittals should abate on the death of the accused. power of revision conferred by section 439 would enable the High Court, where justice to the family of the convicted person might so require, to alter his sentence even after the appeal had abated.

Sub-divisional Magistrates empowered by the Local Government in this behalf were authorized (section 435) to call for records of inferior Courts. This was in accordance with the powers of control in other respects which

they exercised.

Where, in the opinion of the Court of Session or District Magistrate, an accused person had been improperly discharged by an inferior Court, the accused should not be committed without having had an opportunity of shewing cause why the committal should not be made (1 O'K. 98). Provision to this effect had been made by section 436.

When the Court of Session or District Magistrate reported, for the orders of the High Court, the results of examining any proceeding, and recommended that a sentence be reversed, the Court of Session or District Magistrate might order (section 438) its execution to be suspended, and the accused, if in confine-

ment, to be released on bail or on his own bond.

Section 439 (corresponding with Act X of 1872, section 297) had been framed so as to allow the High Court, when exercising its revisional jurisdiction, to interfere with improper acquittals. There was reason to believe that this change was in accordance with the intention of the framers of Act X of 1872.

Where the High Court exercised its powers of revision, no order (section 440) would be made to the prejudice of the accused, unless he had had an

opportunity of being heard.

Part VIII, as to special proceedings, dealt with the procedure relating to the following matters: -criminal proceedings against Europeans and Americans; lunatics; contempts of Court and other offences affecting the administration of justice; maintenance of wives and children; State-prisoners; proceedings in

the nature of habeas corpus.

Section 451 removed some unnecessary differences which existed in the present law between the procedure of the High Courts and Courts of Session in cases in which European British subjects were concerned. In particular, it was provided that, in the Court of Session as well as in the High Court, the requisite moiety of the jury or assessors might be made up by Americans as well as Europeans. Under the present Code (section 78), the trial of a European British subject before the Court of Session need not be by jury. But, under section 234, an European or American, not being a British subject, had an absolute right to be so tried. The Bill omitted the latter provision.

The power given by sections 433 and 434 of Act X of 1872, to discharge from custody or make over to his relative a person acquitted on the ground of insanity, had been extended, in sections 474 and 475, to the case of persons who, being found to be insane at the time of trial, were committed to custody.

The rules as to the proceedings in case of contempts and other offences affecting the administration of justice applied in the present Code to "civil" Courts, and doubts had been raised as to their applicability to the revenue Courts, which existed in most Indian Provinces. The corresponding provisions of the Bill (sections 476, 478, 479, 480, 482) had been expressly made applicable to revenue Courts, and, where the Local Government so directed, Sub-Registrars would (section 483) be "civil Courts" within the meaning of section 480. The position and qualifications of Sub-Registrars varied in different provinces; but, in some parts of the country, they were believed to be fitted for the exercise of these powers.

Section 477 had been framed so as to allow a Court of Session to charge a person for giving false evidence before itself,-a power of which such Courts

were unintentionally deprived by section 472 of the present Code.

Section 487 had been redrawn so as to avoid the difficulty which was felt in determining the meaning of the words "offence committed in contempt of its own authority," which occurred in the corresponding section (473) of Act X

of 1872. Part IX contained certain provisions supplementary to the general rules of procedure contained in the Code. It dealt, first, with the public prosecutor, bail, commissions for the examination of witnesses and special rules of evidence. It then contained certain provisions relating to bonds to keep the peace, for good behaviour, for appearance, &c.; the disposal of property regarding which an offence had been committed; the transfer of criminal cases; irregular proceedings; and, lastly, certain miscellaneous matters

Power had been given to appoint as public prosecutor, in any case committed to the Sessions Court, a Police-officer not below the rank of Assistant District Superintendent. The entire exclusion of the Police from such With the a function was, in the opinion of many authorities, inexpedient. limitation above described, there would be no fear of intimidation of witnesses

or undue influence.

The provisions of the present law as to commissions for the examination of witnesses had been amended in four respects. Where the witness resided in a Native State, power had been given (section 513) to issue the commission to the Political Agent or other local officer representing the British Government. tion 515 required that the interrogatories should be thought relevant by the Magistrate or Court directing the commission. Where a Subordinate Magistrate wished for a commission, he would (section 516) apply to the District Magistrate, and not (as at present) to the Sessions Judge: this would relieve the Court of Session of a duty which could be more conveniently performed by the District Magistrate. And power was expressly given (section 518) to stay the inquiry or trial for a specified time reasonably sufficient for the execution and return of the commission.

Chapter XLIV related to the disposal of property regarding which an offence had been committed. In accordance with a recent rule of the High Court at Bombay, section 528 declared that, when a High Court or Court of Session made an order for the disposal of property, and could not through its own officers conveniently deliver the property to the person entitled thereto, the Court might direct its order to be carried into effect by the committing Magistrate. Orders under this section made in appealable cases would not Magistrate. be carried out until the time allowed for appealing had expired, or, if an

appeal was presented in due time, until the appeal was dismissed.

Where an innocent purchaser bought stolen property and restored it to the lawful possessor, provision had been made (section 530) for payment of the price out of money found on the convicted thief. This was in accordance with 30 & 31 Vic., cap. 35, section 10, and it was thought likely to be useful in India.

Section 532 provided, in case of a conviction under the Penal Code, sections 292, 293, 501 or 502, for the destruction of the obscene books and defamatory matter in respect of which the conviction was had. It also provided for the destruction of adulterated or noxious food, drink or drugs in respect of which a conviction was had under sections 272-275 of the same Code.

This chapter also contained a section (533) equivalent to section 534 of the present Code, providing that, whenever a person was convicted of an offence attended with criminal force, and it appeared that by such force any other person had been dispossessed of any immoveable property, the Court might order such person to be restored to possession. In the present Code this provision was misplaced in a chapter (XL) dealing with the preventive juristion of Magistrates in ease of disputes as to immoveable property.

Chapter XLVII comprised some miscellaneous matters, of which he would mention the following as new. Power had been given (section 552) to the Local Government to fix places of imprisonment or custody. Moneys (other than fines) payable by virtue of any order made under the Code would be recoverable as if they were fines (section 558). The power to compel restoration of abducted females, which now existed only in the Presidency-towns, had been extended (section 562) to District Mugistrates. Power had been given to the High Courts (section 504) to make rules for the inspection of the records of subordinate Courts. And as to miscellaneous criminal proceedings, if any doubt arose as to the procedure to be followed, the Court would be guided by such rules (consistent with the Code) as the High Court might make in this behalf (section 568). The Bill contained no clause equivalent to Act I of 1868, section 5, although similar provisions were contained in each of the Codes now consolidated (X of 1872, section 309, X of 1875, section 107, IV of 1877, section 12). The matter would be provided for by the Bill, which he had mentioned, to amend the Penal Code.

Schedules II and V, which corresponded respectively with Schedules IV and II of Act X of 1872, had been altered so as to adapt them, not only to the Mufassal Courts, but to those of the Presidency Magistrates. The latter schedule now contained no less than 56 forms for most of the proceedings directed or authorised by the body of the Bill. These forms had stood the test of practice in the Presidency of Madras and the Panjáb. He did not know who had framed them; but they seemed to unite brevity with precision. The present Code contained only a set of forms of charges, and nine forms of summonses, warrants, bonds and the instruments incorrectly termed recognizances.

As to Schedule II, the offence of voluntarily causing hurt had been made one for which the police might not arrest without a warrant. A like change had been made as to voluntarily causing hurt on grave and sudden provocation, not intending to hurt any other than the person who gave it. The numerous investigations by the police into charges of "hurt," which the present law rendered necessary, were said to distract their attention from more important duties, and to result in little good to the public.

The offence of adultery, which was now triable only by the Court of Session, had been made triable also by a Presidency Magistrate and a Magistrate of the first class. Enticing married women, which was done only for the purpose of adultery, was now punishable by the Magistrate, and it would seem that adultery should also be punishable by him.

The paragraph relating to mischief by fire with intent to cause damage had been altered in accordance with a proposed amendment of section 435 of the Penal Code. This alteration had been made in order to check the offence, which was very common in some parts of the country, of setting fire to garnered crops. A cultivator might have the whole of his crop destroyed in this way, and yet, if its value was less than Rs. 100 (as was often the case), he could not obtain the aid of the police to arrest the offender without a warrant from a Magistrate.

And now, having mentioned some of the most important amendments in substance which the new Code proposed to make-of these there were altogether 112-Mr. Stokes wished to refer to a recent letter from five of the Judges of the Calcutta High Court, the recommendations of which His Honour the Lieutenant Governor had unreservedly accepted. Those learned Judges thought that the defects of the present Code could be cured by an amending Act. But the Code, which contained 541 sections, had already been amended by an Act (XI of 1874) of 47 sections. The new amending Act proposed by the Judges would contain at least 200 sections, providing for the 112 amendments in substance to which he had referred, and about ninety necessary amendments of the wording of the present Code. Now, since Act X of 1872, with the amending Act of 1874, contained 588 sections, the result would be for the Mufassal a Code of nearly 800 sections, inconveniently contained in three separate enactments, side by side with a number of outlying Acts and Regulations dealing directly or indirectly with criminal Courts and criminal procedure. this shapeless mass Mr. Stokes proposed to give the whole country one compact Code containing only 568 sections, not "nearly seven hundred," as the High Court Judges had alleged with more zeal than accuracy. The learned Judges also alleged that the new Code was "encumbered with matter connected with the Courts having jurisdiction in the Presidency-towns which related to a very small section of those concerned in the administration of justice." Here, again, was an exaggeration, for of the 568 sections of the new Code, those relating exclusively to the Presidency High Courts and Presidency Magistrates were only twelve in number-namely, 18, 19, 20, 21, 362, 370, 411,

432, 433, 434, 441, 501. There were also a few words in section 486, which gave an appeal to the High Court from a conviction in a contempt case by a Court of Small Causes in a Presidency-town. That was all.

Mr. Stokes would have liked to enlarge upon the advantages of having a clear, compact and methodical Code of Criminal Procedure, first, as diminishing expense, delay and uncertainty in applying their admirable substantive law—the Indian Penal Code—for the punishment of offences; secondly, as furnishing a potent instrument of education; and, thirdly, as tending to maintain our intellectual prestige among the quick-witted races over whom we rule in India. But he had trespassed too long on the time and patient attention of the Council; and he would only say in conclusion, that, excluding the special provisions of the Acts relating, respectively, to Coroners in the Presidency-towns, European British vagrants and criminal tribes, the Bill was now, so far as Mr. Cockerell, Mr. Colvin, Mr. Fitzpatrick and himself had been able to make it, a complete body of criminal procedure. No pains had been spared to render its provisions plain and practical; and, in return, he earnestly asked all competent persons to point out the mistakes and omissions which, notwithstanding the careful and repeated revision it had undergone, they would doubtless discover in so large and complicated a work.

The Motion was put and agreed to.

The Hon'ble Mr. Stokes also moved that the Bill be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES RENT ACT, 1873, AMENDMENT BILL.

The Hon'ble Mr. THOMPSON, in the absence of the Hon'ble Mr. Colvin, asked for leave to postpone the Motion that the Bill to amend the North-Western Provinces Rent Act, 1873, as amended be passed.

Leave was granted.

INDIAN PENAL CODE AMENDMENT BILL.

The Hon'ble Mr. Stokes introduced the Bill to amend the Indian Penal Code, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Thompson, Gibbs, Paul and Reynolds and the Mover.

The Motion was put and agreed to.

The Hon'ble Mr. STOKES also moved that the Bill be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

JHÁNSÍ ENCUMBERED ESTATES RELIEF BILL.

The Hon'ble Mr. RIVERS THOMPSON, in the absence of the Hon'ble Mr. Colvin, presented the Report of the Select Committee on the Bill to provide tor the relief of Encumbered Estates in the Jhansi Division of the North-Western Provinces. He wished to state that the modifications and changes which the Select Committee had thought it necessary to introduce into the Bill rendered it necessary to refer the Bill back, with the Report of the Select Committee, to His Honour the Lieutenant-Governor of the North-Western Provinces. It was not intended to take any further measures for passing the Bill into law until the opinion of His Honour had been ascertained regarding the several amendments which had been made in the Bill, and which diverged a good deal from the proposals which had been originally submitted by the Government of the North-Western Provinces. He had also to add that the action of the Council regarding the further progress of this Bill was stayed by the necessity of referring their proceedings up to date to Her Majesty's Secretary of State for India.

MERCHANT SHIPPING BILL.

The Hon'ble MR. STOKES introduced the Bill for the further amendment of the law relating to Merchant Shipping, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Thompson, Gibbs, Paul, Reynolds and Mewburn and the Mover. The Bill, as he had said when obtaining leave to introduce it, consolidated Act IV of 1875 and part of Act XIII of 1878, with certain substantial amendments which he had described. But it did more than this.

Those Acts of 1875 and 1878 related in part to the suspension and cancellation of Board of Trade certificates to which the provisions of the Imperial Merchant Shipping Acts applied. An examination of the provisions of our Acts in connection with those of the Imperial Acts shewed that our Acts dealt with several matters already provided for by Parliament. This was not desirable. Apart from the question which might be raised as to the validity of our law, where that law was not transcribed verbatim, it was inconvenient from a practical point of view that double provisions relating to the same subject-matter should exist side by side. In re-enacting, therefore, the provisions of the Acts repealed by the Bill, an endeavour had been made to restrict its provisions to matters for which the Imperial Acts did not provide and on which it was clear we could legislate. This had necessitated the omission of some and the amendment of other provisions of the present law.

The Bill was, he must confess, a mere piece of patchwork. But this was unavoidable in the present state of the English Statute law on the subject of merchant shipping. He thought, however, that the Bill might be made somewhat more complete by incorporating the unrepealed provisions of Act I of 1859, and if the present Motion were carried, he would ask the Select Committee to incorporate those provisions.

The Motion was put and agreed to.

The Hon'ble Mr. STOKES also moved that the Bill be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

BENGAL PILOTS BILL.

The Hon'ble Mr. Stokes moved for leave to introduce a Bill to give power to arrest persons whose evidence is needed under Act No. XII of 1859 (to make better provision for the trial of Pilots at the Presidency of Fort William in Bengal for breach of duty). He said that the last section of Act No. IV of 1875, which conferred on Courts established for the trial of pilots in Bengal under Act No. XII of 1869 certain powers for compelling the attendance of witnesses, would be repealed if the Merchant Shipping Bill, which he had just introduced, became law. As such a provision was somewhat out of place in a Merchant Shipping Act, it seemed bet'er to re-enact it as a section in Act No. XII of 1859, and the present Bill had accordingly been prepared for this purpose.

The Motion was put and agreed to.

The Hon'ble Mr. STOKES also applied to His Excellency the President to suspend the Rules for the Conduct of Business. It was desirable that the Bill should proceed through the Council pari passu with the Merchant Shipping Bill, and be referred to a Select Committee identical with that to which the Merchant Shipping Bill had just been referred.

The President declared the Rules suspended.

The Hon'ble Mr. Stokes then introduced the Bill and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Thompson, Gibbs, Paul, Reynolds and Mewburn and the Mover.

The Motion was put and agreed to.

The Hon'ble Mr. Stokes also moved that the Bill be published in the Calculta Guzette in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

FORT WILLIAM MAGISTRATES BILL.

The Hon'ble Mr. Reynolds presented the Report of the Select Committee on the Bill to provide for the better government of Fort William.

PRESIDENCY SMALL CAUSE COURTS BILL:

The Hon'ble Mr. Stokes presented the Report of the Select Committee on the Bill to consolidate and amend the law relating to the Courts of Small Causes established in the Presidency-towns.

The Council adjourned to Friday, the 11th March, 1881.

D. FITZPATRICK,

Secretary to the Government of India, Legislative Department.

CALCUTTA;

The 4th March, 1881.

SUPPLEMENT TO The Gazette of India.

No 12.

CALCUTTA, SATURDAY, MARCH 19, 1881.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and mation as the Government of India may does to be of interest to the Public, and such as may usefully be made

known.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of six Rupers per annum if delivered in Calcutta, or nine Rupers if sent by Post.

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA is required by Lam, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the Supplement. For such Orders and Notifications the body of the GAZETTE must be looked to.

Irrigation.

ORDERS ON THE IRRIGATION REVENUE REPORT OF THE NORTH-WESTERN
• PROVINCES FOR THE YEAR 1879-80.

Nos. 108-21 I., dated Fort William, 8th March 1881. RESOLUTION.

Read-

Letter No. A dated 24th December 1880, from the Secretary to Government of the North-Western Provinces, Public Works Department, Irrigation Branch, and its enclosures, being the Irrigation Revenue Report of the North-Western Provinces for the year 1879-80, and a Resolution of His Honor the Lieutenant-Governor reviewing the Report.

OBSERVATIONS.—The general results of the Irrigation Works in the North-Western Provinces for the year 1879-80 may be regarded as satisfactory, although the year was not a favorable one for irrigation, owing to the abundant and timely rainfall. The total area irrigated from the canals in the Province was 1,400,968 acres. This is more than the average of ordinary years, though less than that of exceptional ones. The widespread sickness which prevailed during the autumn and winter months interfered to some extent with the progress of irrigation. On the newly-opened branches of the Ganges Canal the irrigated area increased from 27,214 to 85,135 acres, and on the Lower Ganges Canal, which was only partially brought into operation in 1878-79, the irrigated area increased from 16,691 to 39,779 acres. The total value of the crops irrigated in the Province is estimated at Rs. 4,96,35,163.

2. During the year under review the canal accounts of previous years have been carefully examined. They are now as correct as it is possible to make them. The chief alteration made has been the incorporation of certain book charges under their proper heads both of Capital and Revenue from which they had been previously omitted. These corrections vitiate direct comparison between some items of account for the present and past years. Thus the net balance of interest charges at debit of the works at the close of 1878-79 was Rs. 50,97,492, it now stands at Rs. 57,02,943. Were it not for the alteration of the accounts during the year, this balance at debit of the works would have been reduced to Rs. 34,82,206.

3. The total capital expended on Irrigation Works up to the end of the

year was Rs. 6,27,98,951, which may be divided thus-

Works in complete operation .						4,60,35,380
Incomplete works (Lower Ganges)	0				. •	1,63,86,248
Bundlekund Surveys						6,24,21,618
Bundlekund Surveys	•	•	•			3,77,323
T	OTAL G	ROSS	CAPIT	TAL		6,27,98,951

The total net revenue of the year was Rs. 28,52,872. This is 4.54 per cent. on the gross capital. It is 4.56 per cent. on the capital actually expended on works. It is 6.09 per cent. on the capital expended on works in complete operation.

4. It is most satisfactory to notice the large reductions which have been made during the last three years in the outstanding balances of collections. The balance outstanding at the end of the year was only 1 per cent. of the demand.

5. The decreasing returns from navigation, both on the Ganges and Agra Canals, are disappointing. It is noticed that on the Agra Canal no tolls are levied on Government boats; this should be corrected. No great improvement in the navigation returns is to be expected until the link between the Ganges and Agra Canals, as well as that in the Punjab connecting these with

the Western Jumna Canal at Delhi, is completed. Both these works have been sanctioned, and will, it is hoped, be shortly carried out.

6. It is noticed that a number of mills are being established on the distributary falls in the Meerut Division.

7. The brief notice of the results of the working of the experimental farm at Cawnpore is very interesting. The fact that less water is required to mature a crop in deeply-ploughed land points to the possibility of an extension of the benefits of the canal in future years beyond the present limits when

the system of agriculture is generally improved.

8. Some remarks by the Executive Engineer of the Meerut Division of the Ganges Canal on the spring level, bearing on the necessity of drainage, are alluded to by the Chief Engineer. The subject is of great importance. In future reports the effects of drainage works in the reduction of swamps, in lowering the spring level and on reh efflorescence should be given wherever such works have been carried out.

ORDER.-Ordered, that a copy of this Resolution and of the Report and Resolution by the Local Government be forwarded to the Secretary of State and to the Finance and Commerce and Home, Revenue and Agricultural Departments of the Government of India for information.

Also, that copy of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, Irrigation

The Governments of Madras, Bombay, Bongal, and the

the Punjab.
The Chief Commissioners, Central Provinces, British Burumh, and Assam.
The Resident at Hydernhad.
The Agents to the Governor General, Central India and Rajputana.

Branch, for information and guidance, and to the local Governments and Administrations noted in the margin, in the Public Works Department, Irrigation Branch, for information, and to the Foreign Department for communication to the Government of Mysore.

Also, that this Resolution and the Resolution of the Local Government be published in the Supplement to the Gazette of India.

> J. CROFTON, Major-Genl., R.E., Depy. Secy. to the Goot. of India.

No. 1354 A., dated Allahabad, 13th December 1880.

RESOLUTION-By His Honor the Lieutenant-Governor, North-Western Provinces and Oudh.

The results summarised in the Chief Engineer's review are decidedly satisfactory. year under consideration was one of unusually abundant and timely rainfall, when, it might be supposed, canal irrigation would have been quite unnecessary; but not only did the canals pay 4½ per cent. on the total capital of 624½ lakins of rupees, invested in the irrigation works of the North-Western Provinces, but the steadily increasing areas of sugarcane, rice, indigo, and cotton point unmistakeably to the steadily increasing prosperity of the cultivating community dependent on the canals.

2. As year by year the extension of light railways in these provinces affords a continually widening market for the valuable produce of the canal-irrigated tracts, His Honor is convinced that the capital and wealth accumulated in them will assure the stability of the land revenue, and place it in a position independent of the fluctuations of the seasons. The revision revenue, and place it in a position independent of the flactuations of the seasons. The revision of the agreement under which the financial responsibility for and general control of the canals in these provinces was, in 1877, made over to the local Government, has lately engaged the Lieutenant-Governor's serious attention, and His Honor is desirous of a re-arrangement of the terms then approved, admitting the responsibility of the Province for interest, at 1/2 per cent, on all capital invested in canals in the Province, whether classed as Productive or Agricultural works, and the claims of the Government of India to all land revenue and owners' rate due to the operation of State Irrigation Works, but asking in return that the very doubtful item of two lakhs (estimated net profits of these works in 1877) and the claim to half of any advantage gained by the Province, shall be abandoned by the Government of India. His Honor's desire being to expend all available Provincial funds on Provincial light railways, he would prefer that all canal capital should be supplied by the Imperial Government.

3. The Lieutenant-Governor fully endorses the Chief Engineer's remarks regarding the good work done by the canal establishment, and is confident that its Officers will maintain, in the future, the high reputation which they have earned in the past.

HENRY A. BROWNLOW, Col., R.E., Secy. to Gott., N.-W. P. and Oudh, Public Works Department.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORT ON THE TOBACCO OPERATIONS AT CHAZIPUR AND PUSA DURING THE YEAR 1879-80.

No. 25A, dated Campore, the 11th January, 1681.

From-F. N. WRIGHT, Esq., Offg. Director, Department of Agriculture and Commerce, N.-W. Provinces and Oudb,

To-The Secretary to Government, North-Western Provinces and Oudh.

I have the honor to report on the tobacco operations at Gházipur and Pusa, under Messrs. Begg, Dunlop and Co., during the year 1879-80. The delay in submitting this report is owing to the fact that the Superintendent of the Tobacco Factory, being much pressed with work, found himself unable to furnish the information required, and I was obliged to send my Personal Assistant to obtain it by personal inquiry.

- 2. Owing to causes previously described, the most important part of the Tobacco farm establish. operations is now centred in Pusa, in the district of Darbhanga, in the Lower Provinces. Both Mr. Wishart, the Superintendent, and Mr. Williamson, the Manager, have their head-quarters at Pusa, and they have now one European and one American assistant (Messrs. Pickford and Thomson) appointed by the firm. The apprentice, Mr. Caine, of whom mention was made in last year's report, is now placed in independent charge of the Gházipur farm. The connection of Mr. Cabaniss (another American curer) with the firm ceased on the expiry of the term for which he engaged. An agent has been appointed, whose sole duty is to travel all over India with the object of introducing the manufactured tobacco, and his mission has been very successful with the British troops so far. The native hands employed in the tobacco business number about 400.
 - 3. An account of the disposal of the crop of 1877-78 was given in the report of last year. The quantity of cured leaf exported to foreign countries from the crop of 1877-78 was:—

From Pusa to England							15,484lbs.
, Gházipur to England	4		4	•			9,763 ,,
" Pusa to Australia		•	٠		•		4,746 ,,
				TOTAL		٠	29,993lbs.

- 4. As the market in England was very dull last year, the average price of Tobacco sent to England and the tobacco sold was not higher than $3\frac{\pi}{4}d$. per ib.; but some of the best leaf fetched as high as $5\frac{1}{2}d$. per ib. It was also found that there was no market in Australia for the cured leaf, as sufficient tobacco of this class is grown in the colonies, which sells at the low price of 4d. per ib. The whole of the tobacco sent to Australia was therefore re-shipped to England. The market, however, gradually improved, and the tobacco now in stock in England is being sold at $3\frac{1}{2}d$. per ib. This tobacco was the result of the first year's experiments in curing, and was not so well cured as it might have been.
- 5. These results are hopeful, for this was the rate at which American tobacco of an average quality was being sold in England at the time; and as the firm is now capable of turning out a far better class of tobacco than these samples, the question of Indian

tobacco successfully competing with the American article is practically solved. The price of the best tobacco shipped this year for England (5½d.) was a halfpenny more than what Mr. Buck ventured to hope for in his report to Government, No. 806A., dated the 18th October 1876, para. 25. Various offers have been made for the purchase of tobacco, but the firm is not now in a position to accept them, owing to causes hereinafter mentioned.

- 6. It being thus proved that the Indian soil is capable of producing a kind of tobacco equal in quality to that of the bulk of America, there is no reason why India should not evenannas instead of Re. 1 (40 cents) as in America. A difficulty, however, now presents itself which requires time to overcome it. The tobacco trade in England is highly conservative, reluctant to move out of the old groove, unless a continued supply of large quantities of the article is first guaranteed, which the firm in the present early stage of operations dared not do. A series of bad years has taught them to be cautious, and they considered it wise not to extend their operations on too large a scale before their establishment had been properly trained and the industry had taken root.
- 7. A similar demand came from the French Government. Five samples Orders from the French were sent previously to the Director of Tobacco Mono-poly in France, three of which were approved. An order for 8,000 kilogrammes (about 40 maunds) then came, and inquiries were made as to the extent of the supply that could be relied on. The firm supplied the 3,000 kilogrammes at Rs. 18 per maund delivered in Calcutta, but were unwilling to commit themselves by promising to supply regularly a given quantity.
- S. Meanwhile, the manufacture of smoking tobacco, an account of which Development of manufacture. Was given in last year's annual report (paras. 15, 16, and ture. 23 to 29), has been making steady progress. The demand for it in the Indian market developed so rapidly, that it was soon found that, with the present establishment and the present extent of cultivation, the firm would have for a time to give up any idea of competing in the European field; for the enterprise has not yet become sufficiently strong to carry on the struggle in both places. The insufficient quantity of the outturn during the last two years, the initial expenditure incurred in importing machinery and training up hands in the manufacturing processes, the greater certainty of success, the immediate and higher profit expected in this branch of the industry for the capital (Rs. 1,00,000) which the firm have sunk,—all decided them in favor of confining themselves to manufacturing to meet the demand for local consumption.
- 9. These were the causes which have prevented any export of tobacco to foreign countries since the submission of the last report. How long a time will elapse before the firm again finds itself in a position to export, it is difficult to say: year by year the extent of operations is increasing, but large supplies of tobacco cannot be available for export until the Indian market is thoroughly satisfied.
- 10. The produce of 1878-79, of which an estimate was given in para. 7 of Stock in hand on 1st April last year's report, proved to be less than the quantity estimated. The actual outturn was—

	To	TAL		120,000lbs.	instead of		. 165,000lbs
			-				
Gházipur	٠		9	43,000lbs.	instead of	•	. 80,000lbs
Pusa			٠	77,000lbs.	instead of	٠	. 85,000lhs

To this should be added 35,000fbs. manufactured or in process of manufacture. The year 1879-80, therefore, commenced with a stock in hand of 155,000fbs. of good leaf, the bulk of which has since been manufactured and sold.

Area under tobacco in 1879.

11. In the year under report (1879-80) the area planted with tobacco was as follows:—

	• '			Home farm.	By cultivators.	Total.
				Acres.	Acres.	Acres.
Pusa				. 150	58	208
Gházipu				. 40	66	108
				-	-	-
		To	TAL	. 190	124	814

This shows an increase of 75 acres over the area of 1878-79. The area has been further increased in 1880-81, being as follows:—

				Ш	ome farm.	By cultivators.	Total.
				A	cres.	Acres.	Acres.
Pusa .					165	121	286
Gházipur					43	188	181
						-	
		To	TAL		208	259	467

- 12. The season of 1879 was not very favorable on account of the excession in sive rains, and the outturn was rather light. Early planting and cutting, the advantages of which were shown in para. 11 of last year's report, could not be effected on account of the great moisture in the ground.
- 13. Cultivators grew tobacco for the factory under the same arrangements as mentioned in para. 9 of last year's report, viz., land and seed were given to them by the firm on condition of their making over a third of the produce and selling the remaining two-thirds, if the firm chose to take them.
- 14. The Javan system, mentioned in para. 10 of last year's report, could not be tried in the 1879-80 season, but arrangements have been made for its introduction in 1880-81 (present year). An advance of Rs. 20 per bigha (three-fourths of an acre) has been made to the cultivators for growing tobacco near the Pusa farm, on condition—(1) that cultivators sow their best lands with tobacco, the seed being supplied by the firm; (2) that when the produce is ready, the cultivators sell it in a green state to the factory, the price being fixed by four arbitrators, two appointed by the firm and two by the cultivator. Seventy-five acres (100 bighas) have been cultivated with tobacco in 1880 under this system. The seed, as usual, is imported by the firm from America, and is known by the names of the States from which it comes, as the Connecticut, Kentucky, Maryland, &c.
- 15. One great convenience in the establishment of a tobacco factory at

 The natural home of tobac.

 Pusa has been found in the fact that, in Upper India,
 tobacco has found its natural home in the moist country
 under the Himalayas, from Bahraich in the west to Kuch Behar in the east;
 and the experience, which the cultivators have gained by cultivating it for

centuries, will prove of immense value to the new enterprise. The aptitude with which the cultivators here grow tobacco, and the care which they bestow upon it, are wanting up-country.

- 16. A description of tobacco-growing in this part of the country may not be out of place here. For tobacco some rotation of crops is practised, and cultivators seldom sow it on the same land for three years together. The crops generally preferred to precede it is the root crop, Batatas edulis (sakarkand), extensively used as food by the poorer classes for some months in the year, which is sown in the rains and dug up in cold weather. After this or some other rabi crop has been taken off the field, the land is well dug with a hoe, and then ploughed twice every month. The manure used is chiefly cow-dung, which is thrown on the land, or cattle are penned on the ground. Land being thus well ploughed and well manured, is fit for planting with tobacco on the cessation of the rains in the month of September. The seed is first sown on a seed-bed, from which the young seedlings are transplanted to the field. After this, it requires very little care except a little weeding and picking off the superfluous shoots, leaving ten or twelve leaves on the plant. No irrigation is necessary; a little water is only allowed for two days at the time of transplantation. The crop is ready for cutting in February or March. The yield of an acre is from twelve to twenty maunds, which is generally sold at Rs. 5 to Rs. 8 per maund. The variety of tobacco called Dhamakuli is chiefly grown in this part of the country.
- 17. The home farm of the factory is cultivated in the same way. The manure used is composed of indigo refuse and cow-dung, of which 50 to 100 maunds are allowed to an acre. In order to have the tobacco ready for cutting before the end of January, the factory crop is sown earlier than the native crop.
- 18. It must be remembered that the coarse thick leaf produced by natives on their field, by the excessive use of nitrogenous constituents, does not answer the purposes of the factory. Finer leaf, with considerably less acrid taste, is only fit for curing purposes. The outturn per acre of leaf for the factory is therefore estimated at 800lbs. instead of 1,600lbs. (20 maunds), as in the native-cultivated land. Indeed, the outturn at Pusa during the last two years did not exceed 600lbs. per acre, owing to the finer texture of leaf grown, and to the land not being so heavily manured with animal matter as the native lands.
- 19. But all the leaf produced in a tobacco field does not give prime tobacco. An acre generally produces about 10,000 plants, of which one-fourth gives first class tobacco; one-fourth, second class; and the remaining half, third class tobacco. All these classes will give a total weight of about 600lbs. of marketable article.
- 20. The price paid to the cultivators for tobacco grown for the factory is

 Price for green tobacco, and two annas for 10 first class plants, one and a half anna for 10 second class plants, and one anna for 10 third class plants. At this rate the price paid for an acre of tobacco 600lbs.) is about Rs. 40, or 15lbs. per rupee, or a little above one anna per lb. The cost of curing is very small, probably not exceeding more than a rupee for 100lbs. The cost of growing and curing tobacco has thus been reduced from what was restimated by Mr. Ruck in his report, No. 806A., dated the 18th October 1876, estimated by Mr. Ruck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A. dated the 18th October 1876, estimated by Mr. Buck in his report, No. 806A.

estimating the cost at 5d. per lb., Mr. Buck, in para. 31 of the above report, remarked that the profit would be increased in the five ways following:—

- (1) By the increase of the outturn over 800lbs. per acre.
- (2) By the increase of area under tobacco over 100 acres. .
- (3) By the reduction of cost below Rs. 80 for 800ths.
- (4) By improvements in curing so as to produce a class of tobacco which will fetch on the average more than 5d. a pound.
- (5) By saving or reducing the curer's salary.

The last charge becomes an unimportant one in cultivation on a large scale, and, with the exception of the first, all the points have now been achieved.

Outturn	in 1879-80.		21.	The	outtu	rn of	cure	ed	tobacco	in	1879-80 was-
											125,000lhs. 38,000lhs.
								T	OTAL		163,000lbs.

The whole of it has been kept for manufacture.

22. A description of the curing processes and the curing houses has been given in the last year's report (paras. 12 and 13), and it is needless to repeat it here. The flue curing system having succeeded well in Pusa, has been extended to Gházipur, and barns capable of holding the produce of about 40 acres have been fitted with flues. A large underground house has also been built for curing the late tobacco when the weather has become too dry to admit of successful curing in the ordinary houses. Some of last year's produce was cured in it, and it was found to work well. At Pusa, houses capable of holding the produce of about 50 acres have been fitted with flues, and some fine golden leaf was cured in them in 1879-80.

Manufacture of smoking mix. attention to the manufacture of the smoking mixtures, tures and cakes. cavendish and cigars, for the Indian market, have already been shown in earlier paragraphs of this report. At the first stage of the operations, only curing and not manufacture was contemplated. But at the outset the firm succeeded in turning out only a small quantity of good leaf, quite insufficient to make an impression on the European market; and as no benefit could be derived by shipping it until a large supply could be sent annually, Mr. Williamson advised the firm to manufacture the tobacco; and the firm allowed him to get out a little machinery as an experimental measure, in the hope of its paying the expenses of the enterprise, until it was sufficiently profitable to emable them to grow and ship largely to England. All the best leaf having already been sent to England, Mr. Williamson had to make the cavendish from the balance of the tobacco left in stock, and owing to defective arrangements and untrained labor the result was unsuccessful. He, however, advised the firm to continue the experiment, and they accordingly brought out more machinery from America. The experiment was continued, but the factory was transferred to Pusa. Within a first time the manufactured tobacco found favor in many quarters, and the experiment proved a success. The 1879-80 crop was cut by this time, and the factory requirements having considerably increased, the firm was advised to retain the whole of that year's crop for manufacture. Mr. Williamson states that "most of the objections to Indian tobacco in this country have resulted from the fact that the parties experimenting have always put the tobacco on the market too new, thereby stamping it acrid and unfit for European use."

Manufactured tobaccos and their prices.

Manufactured tobaccos and their prices.

Manufactured tobaccos and cavendish, golden leaf, bright smoking mixture, dark smoking mixture, honey-dew, cigars, and cigarettes were made. These tobaccos are sold by the firm at the following prices:—

					. A.		
Golden leaf at		٠		1	8	0	per th: in 1 lb. cases.
Ditto .	. :						per lb. in 1 lb. cases.
Bright smoking	mixture	at			0		per lb. in 1 lb. cases.
Ditto dit	to .						per th. in 1 lb. cases.
Dark smoking a					12		
							per lb. in 1 lb. cases
Golden leaf cake	e at .				8		per Ih.
Honey-dew cake					10		per 16.
Ditto,	6"×11"	at			12		per 16.
Black cavendish					3		per 16.
Ditto,	6"×3" 1				7	0	per 1b.
Ditto,	6"×11"			0		0	per lb.
							4

A liberal discount is allowed to retail dealers, who may be found all over the North-Western Provinces.

25. The increasing demand for the tobacco is clearly brought out in the sole of smoking mixtures and following monthly statement of sales, in which, in order to put the matter more strongly, I have exceeded the limit of the year to which this report belongs:—

				1		Cut tobacco.		(
	Month				Golden lunf.	Bright smoking mixture	Dark smoking mixture.	Golden lonf cake.	Honey-	Black cavendish.	Total.
					lbs.	lbs.	lbs.	ibs.	Iba.	lhe.	1bv.

		Тота			5,908	9,034	8,307	1,826	4,890	87,600	117.865

26. At this stage of the operations the cost of manufacture cannot be correctly stated, owing to the large number of untrained mon employed in it, who have hitherto been only learning their work. Suffice it to say that after paying a liberal discount to retail dealers, sufficient profit is left to justify the

continuance of the business. It will be seen from the above statement that the

largest quantity of tobacco is sold in the cold season.

27. The firm brought from Madras three eigar-makers and three boys to assist them, but the climate of Pusa did not suit them, and they left shortly after, except one man and a boy. Three Bengali eigar-makers were afterwards engaged in the factory, two of whom are now working. Twelve Pusa boys have been taught by these Madrasi and Bengali experts, and now make from 150 to 200 good eigars a day; but with practice they will probably be able to make 500 or 600 a day. Six classes of eigars and eigarettes are made in the factory, viz., three kinds of Havannah-shaped, one kind Burmah-shaped, and two kinds of eigarettes. The prices for which are:—

No. 1 Havannah, Rs 3 per 100.

No. 2 ditto Rs. 2 ditto.

No. 3 ditto Re. 1-4 0 ditto.

No. 2 ditto, Re. 0-12-0 per 100.

No. 2 ditto, Re. 0-12-0 per 100.

The eigar trade developed in the year 1850-81, and does not properly belong to the present report. But it may be noted here that the sale of eigars and eigarettes is daily increasing; and that in the four months from August to November last upward of 200,000 eigars and eigarettes have been sold, valued at about Rs. 3,000.

28. It will be seen from the above report that the tobacco operations have made rapid progress since the last report, except in one branch of the industry, viz., in opening a market in Europe for Indian tobacco, which may, perhaps, be looked upon as the principal justification for support of the North-Western Provinces Government to the enterprise. As soon as the Indian market is satisfied, the present operations sufficiently consolidated, the establishment properly trained and cultivation extended, the firm hope to be able to produce enough tobacco of good quality both to meet the Indian demand and to make regular and large shipments of leaf to England.

29. The Gházipur lease for five years ends next June (1881), but the firm have not as yet made any proposal to avail themselves of the clause in their agreement, giving them the option to renew the lease. This will form the

subject of a separate communication.

30. But it may be remarked here that the Gházipur climate is not so favorable to tobacco growing as the moist country at the foot of the hills, where irrigation is hardly necessary. Irrigation by water raised from a depth of 80 feet forms a heavy item in the total cost of cultivation at Gházipur. The cultivator; therefore show great reluctance to grow it, for with the same cost they can produce a more profitable crop, e.g., the sugarcane; on the other hand, in the country where the people, fully availing themselves of the natural advantages conferred by a favorable soil and climate, have been growing tobacco from time immemorial, the supply of green tobacco for curing purposes is practically unlimited; and although the leaf may be of a coarser quality than that produced at Gházipur, the cost of turning out a marketable article is proportionally much less. The tobacco operations may now be divided into two branches: manufacture for Indian market, and curing for the European market. The success of the former is now beyond doubt, and it could be left to the firm itself to carry it on to the end. The curing operations, though so far successful, have not yet fully developed, and further progress will depend much on the support of the Government of the North-Western Provinces and Oudh in the direction I have indicated.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

BEPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 16th MARCH 1881.

GENERAL REMARKS.—Slight rain has fallen during the week in parts of Madras, Bombay and Bengal. The harve-ting of the rabi continues. The results are fair generally except on unirrigated lands in the North-Western Provinces and Oudi. Prospects are, on the whole, good. Though fever, cholera, small-pox, measles and cattle-disease are reported from place the public health has been generally satisfactory.

C. GRANT,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA. DEPARTMENT OF FINANCE AND COMMERCE.

ANNUAL REPORT ON THE OPERATION OF THE POST OFFICE OF INDIA, 1879 80.

No. 1080, Fort William, the 14th March, 1881.

RESOLUTION.—By the Government of India, Department of Finance and Commerce.

The year 1879-80 was not behind its predecessors in the matter of postal reform and development. The leading changes made were the introduction of Post-cards, which are carried for the lowest fee charged in any country, the introduction of Stamped Nine-pie Envelopes for soldiers' overland letters, and the partial reduction of the registration fee. The most important changes occurred towards the close of the year. In January 1880 the Money-order business was placed under the management of the Postal Department- On the 1st February 1880 the new contract for accelerated carriage of the Overland Mails came into force, and with it the reduction of the postage rates on Letters, Post-cards, Newspapers, Books, and Soldiers' Letters. The valuable services rendered during the year by the Department as a carrying agency for passengers, stores, and letters in connection with the Afghan war, deserve special mention.

Postal facilities were increased by the addition of 17 post offices, 225 letter-boxes, and 194 village postmen during the year. The aggregate length of postal lines decreased by 536 miles; but there was an extension on the railways of 444 miles.

The Post-cards acquired an immediate popularity, and, notwithstanding their competition, the numbers of letters received into the post exceeded by 2 per cent. the number received in the year previous. It is remarkable that the Post-cards have not interfered with the demand for Half-anna Envelopes, which continued unabates. The total increase for the year in respect of all classes of correspondence, that is, Letters, Post-cards, Newspapers, Parcels, Books, and Packets, was 8.4 per cent.

The Parcel-post continues to gain in popularity, particularly as regards the despatches from England to India. The net revenue from this source was Rs. 1.18.084.

Correspondence with the United Kingdom increased 6.8 per cent. for Letters and Newspapers, and 24.6 per cent. for Books. This result is almost entirely independent of the new reduced rates which were introduced on the 1st February 1880.

The Dead Letter Office effectively disposed of 63.26 of the articles sent to it.

The expansion of the Money-order business, in consequence of the vastly extended agency for receipt and disbursement afforded by th Post Offices, is remarkable. Almost equally remarkable is the sudden development of the insurance system. This system, which was only introduced at the commencement of 1878, enabled property, aggregating the enormous total of Rs. 6,97,69,219 to be transmitted by post, without risk to the sender, in the year. The value-payable system has also developed very rapidly, but from its nature it is ordinarily used only by the European section of the public.

The financial results were good. There was a net surplus of Rs. 1,52,545 after debiting the Department with every charge that can be made against it. Taking the purely Postal Department alone, and excluding the profits earned in the carrying branch, there is a deficit of Rs. 1,72,392.

The charges on account of pensions are taken at the average payments on this account of the last five years. This is probably much too low. The Department is rapidly expanding, and the pension liabilities now being incurred are almost certainly much greater than the payment now made on this account. A more accurate result would probably be secured by taking percentages on

the entire charges for superior and inferior establishments respectively; but the Governor General in Council does not at present wish to direct this change, which would involve a troublesome calculation. But the charge must be growing, and it would probably be better to take the actual payment of the last preceding year instead of the average of the last five in calculating the financial results of the year.

The interesting table from paragraph 77 is extracted. It is a most satisfactory record of progress:—

Y	EAŽ.				Comparison of number of let- ters and news- papers (those of 1865-66 being repre- sented by 100).	Comparison of revenue from private corre- spondence (that of 1855-56 be- ing represent- ed by 100).	Comparison of expenditure (that of 1855-56) being represented by 100).
1855-56, first complete y	ear of ne	w rates			100	100	100
1867-68, thirteenth	· ditto		٠	٠	207	237	161
1868-69, fourteenth	ditto		٠		228	258	182
1869-70, fifteenth	ditto			•	253	246	190
1870-71, sixteenth	ditto		٠		257	235	175
1871-72, seventeenth	ditto		٠		269	272	178
1872-73, eighteenth	ditto	•	٠		279	279	177
1273-74, nineteenth	ditto	٠	٠		328	284	184
1874-75, twentieth	ditto		٠		349	305	189
1875-76, twenty-first	ditto	٠		•	352	326	191
1876-77, twenty-second	ditto		٠		368	345	196
1877-78, twenty-third	ditto	9			387	378	206
1878-79, twenty-fourth	ditto				394	390	222
1879-80, twenty-fifth	ditto				428	417	234

Mr. A. Monteath had charge of the Department during the year. The Governor General in Council has already separately recorded his appreciation of the public services rendered by this distinguished officer. Of the other officers of the Department, Mr. LeBreton has particularly earned the thanks of Government for his excellent services in Afghanistan. The work done by Lieutenant-Colonel Moore Lane and by the officers named in paragraph 81 of the report, also deserves public acknowledgment.

ORDERED, that this Resolution be communicated to the Director General of Post Office of India, and that the Report and the Resolution be published in the Supplement to the Gazette of India.

R. B. CHAPMAN,

Secretary to the Government of India.

ANNUAL REPORT ON THE OPERATIONS OF THE POST OFFICE OF INDIA FOR THE YEAR 1879-80.

No. 10724, dated 31st December 1880.

From-F. R. Hogg, Esq., Officiating Director General of the Post Office of India, To-The Secretary to the Government of India, DEPARTMENT OF FINANCE.

I HAVE the honour to submit the Annual Report on the Operations of the Post Office of India during the year 1879-80.

UNIVERSAL POSTAL UNION.

2. The provisions of the Convention of Paris, dated the 1st June 1878, detailed in the last annual report, came into force on the 1st April 1879. Eight additional countries have since joined the Universal Postal Union, viz.:—

Countries admitted to the Universal Postal Union during the year.

Bulgaria. The Republic of Honduras. Liberia. United States of Venezuela.

Mexico. Peru. Salvador West Indies (viz., Antigua, Dominica, Montservat, Nevis, St. Christopher and the Virgin Isles).

NEW CONTRACT WITH THE PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

- 3. A new contract with the Peninsular and Oriental Steam Navigation Company for the conveyance of the East India and China Mails, entered into by Her Majesty's Post Master General for a term of eight years at the reduced subsidy of £370,000 a year, came into force from the 1st February 1880. An average speed of 11 knots an hour was secured between Bombay and Suez and between Alexandria and Brindisi; thus, about 15½ days are now occupied in the passage of the mails between Bombay and Brindisi, an extra allowance of two days being given for the homeward voyage during the south-west monsoon. Under this contract the subsidiary services between Southampton and Suez, between Point de Galle and Calcutta, and between Hong-Kong and Yokohama were dispensed with, the service consisting only of a weekly line between Bombay and Suez and between Alexandria and Brindisi, together with a fortnightly line between Suez and Shanghai.
- 4. The introduction of the new contract in February 1880 was followed at the outset by several late arrivals of the European mail in Bombay: these formed the subject of remonstrance from the local Government and of representation to the British Post Office. Since then the service resumed its accustomed regularity. Under the old contract, on one occasion the Sautharmaton mail reserved India a week late arrives to a break down of the S.S. Australia. then the service resumed its accustomed regularity. Under the old contract, on one occasion the Southampton mail reached India a week late, owing to a break-down of the S. S. Australia in October 1879. Again in December the S. S. Lombardy was unable to leave Southampton through the density of a fog, and the heavy portion of the mail, having been sent vid Brindisi, reached India a week before due date; and in October 1879 the S. S. Hindostan was totally reached off Madras, but the passengers and mails were saved. In May 1879 the S. S. Australia washing the near Malta, and reached England fifty-one hours behind contract time. Finally, in February 1880, the Travascore, with the homeward mail, ran ashore near Brindisi, but the passengers and mails were landed in safety.

REDUCTION OF THE POSTAGE RATE VIA BRINDISI.

5. But the abolition of the Southampton route necessitated the transmission of the entire mail through Italy and France, and the continental charges to be levied on this mail formed

the subject of considerable controversy. It seemed obviously unfair to deprive the public altogether of the cheaper route via Southampton, without providing some corresponding advantage. India insisted either on exercising its right under the Postal Union Convention of unaccelerated transit through Italy and France at low rates, or in securing a substantial reduction in the charge for transit by special train. Protracted negotiations ensued, which resulted ultimately in a reduction in the cost of special train transit by about one-third of the former rate, thus diminishing the charge on Indian mails alone to the extent of about £20,000 a year. Thus, the advantages of accelerated transit through Europe were extended to the heavy portion of the mail, which formerly travelled via Southampton, and there remains now but the one route, viz., that via Brindisi. The reduction in Indian rates of postage which followed this settlement is shown below. These revised rates came into operation with effect from the 1st February 1880—

			Former rates.	Revised rates from 1st February 1890.
	/ Intters		5 annas per half-ounce	44 annas per half-ounce.
	Post Cards	0 = 0	2 annas each	1 annas each.
Vid Brindisi	Newspapers	401	2 annas per 4 oz.	13 annae per 4 oz.
	Books, &c.		2 annas per 2 oz.	1) annas per 2 oz.
	Soldiers' letters	. * *	21 annas each	1‡ annas each.

COMMUNICATION WITH AUSTRALIA.

6. Fortnightly, instead of four-weekly, communication having been established by Her Majesty's Post Master General between England and Australia, advantage was taken of these steam-packets for the transmission of Indian correspondence, and special arrangements were made with the Peninsular and Oriental Company for the use of their non-contract vessels between Bombay and Ceylon.

SOLDIERS' LETTERS.

7. Private soldiers and seamen, belonging to Her Majesty's ships, possess the privilege of sending and receiving prepaid letters not exceeding half an ounce in weight by British packet at a postage of 1d. or its equivalent per letter. On the abolition of the Southampton and Suez line, such letters were sent by private vessels; but a special arrangement was afterwards entered into under which all such letters were transmitted from Bombay to Southampton by the non-contract vessels of the Peninsular and Oriental Company.

SEA COMMUNICATION WITH EUROPE.

8. As explained in previous reports, communication by sea with Europe is a service separate from the Indian Inland Post to which this report relates. Sea postage collected by India is all credited to Great Britain; and when this, as well as the British collections, have been deducted from the total cost of the sea service, the balance or net cost is made a charge in equal shares upon Great Britain and India. The Indian share of the net loss on the European mail service during the last eleven years is shown below—

			£	
1869-70		1	73,110	
1870-71		(89.150	
1871-72	+64	(88.110	
1872-78	0.41		61,072	Adjusted amounts as explained above. The increase in 1876-77
1873-74	111		54,770	and following years was caused by the reduction of postage carried
1874-75	***	1	57.170	out on 1st July 1876, when India entered the Union.
1875-76	2 4 4	{	53,125	
1876-77	***	(88,685	
1877-78	6.0+	7	70,749/	
1878-79	***	•••	70,000	The calculations of the sums properly belonging to these years not having been received from London, the amounts shown have
1879-80	941	91	5.700	been estimated.

9. The increase in the year under review is due to the reduction of postage introduced from the lat April 1879 under the Convention of Paris. This reduction was explained in the last annual report.

LOCAL STEAM SERVICES.

10. The changes effected during the year in the Local Steam Services have been made the subject of remarks opposite the entries affected thereby in the following statement:—

By the British India Steam Navigation Company.

- (6) Weekly communication between Madras, Rangoon and intermediate ports on the north-east coast.
- (8) Semi-weekly communication between Bombay and Karachi, with a weekly continuation to the Persian Gulf.
- (9) Four-weekly communication between Aden and Karachi.
- (10) Four-weekly communication between Calcutta and Port Blair, with extensions to Camorta and Rangoon.

(1) Fortnightly communication between Calcutta and Kyouk-Physos Sandoway during the fair season.

(2) Fortnightly communication between Calcutta and Rangoon via Akyab.

(3) Weekly communication between Calcutta, Rangoon and Moulmein.

(4) Four-weekly communication between Calcutta, Singapore and intermediate ports.

(5) Weekly communication between Moulmein and Singapore via Penang and Malacca.

(6) Weekly communication between Madras, Rangoon and intermediate ports on the north-east coast.

(7) Weekly communication between Calcutta and Bombay, touching at intermediate ports on the Coromandel and Malabar Coasts.

(8) Coasts.

formed by the Company on its own account.

No. 10 is under the control of the Military Department, the consideration given being, not in the form of subsidy, but of guaran sed rates for the transport of the terms atteres.

A new contract was made for this line, with effect from the 1st November 1879, for two years, but the conditions of the service were not materially changed.

By other Agencies.

- (11) By the Irrawaddy Flotilla Company, a weekly communication between Rangoon, Mandalay and intermediate ports, with a monthly extension to Bhamo, the subsidy being Rs. 5,000
- er mensem.

 (12) By the Irrawaddy Flotilla Company, a semi-weekly communication between Rangoon and Bassein on a monthly subsidy of
- (12) By the Irrawaudy Floring Company, a monthly subsidy of Rs. 1,500.

 (13) By the Burmese Steam Tug Company, a fortnightly communication between Moulmoin, Tavoy and Mergui on a monthly subsidy of Rs. 1,500.
- (14) By Jardine, Matheson & Co. (of Hong-Kong), and Apear & Co. (of Calcutta), a monthly communication between Calcutta, the Straits and Hong-Kong, the dates of departure being regulated primarily with reference to the Calcutta opium

os. 11 to 13 are under the control of the Chief Commissioner of British Burmah, the Post Office contributing a portion (Rs. 500) per mensem) of the aubsidy for No. 12.

No subsidy for No. 14.

- (15) By the Euphrates and Tigris Steam Navigation Company, a communication thrice a month between Busreh and Bagdad.
- (16) By the Irrawaddy Flotilla Company, daily communication between Prome and Thyetmyo on a monthly subsidy of Rs. 500.
- (17) By the Peninsular and Oriental Steam Navigation Company, fort-nightly communication between Bombay and Galle.
- (18) By the Peninsular and Oriental Steam Navigation Company, fort-nightly communication between Calcutta and Galle, touching at Madras.

o. 15 is under the control of Her Majesty's Secretary of State for India; the subsidy is £300 per mensem. The contract came into force on the 1st January 1876, and will end on the 30th April 1884. Though compelled only to run thrice a month, weekly therwork actually run in connection steamers actually run in connection with line No. 8.

No. 16 is under the control of the Chief Commissioner of British Burmah, and began working in June 1879. The Post Office contributes a portion (Rs. 125 per mensem) of the subsidy.

Nos. 17 and 18 are non-contract lines maintained by the Company on its own account in connection with the China and Australian mail services. The Post Office pays by weight for the conveyance of mails forwarded by these non-contract

A small boat service, not worked by steam, continues to be maintained by the Ceylon Government between Point Calimere on the Indian side and Kankesanturai on the Ceylon

11. As regards the regularity with which the British India Steam Navigation Company maintained their contract sea services, I note below eight instances of delay in the arrival of the mail at Karachi:—

Name	Name of vessel. Due date of arrival at Karschi.				Actual date of	Saracti.	No. of hours late.			
				1				•	H.	M.
Coconada	000		6th April	***		6th April		***	2	58
Vingorla		•	16th May	***	***	16th May	0.04	***	6	0
Pachumba	***		28th June	***	p 6.0	29th June	000	***	20	10

Vingorla	***		5th August	***		5th August	***	4,,	7	0
Umballa	***	***	9th ,	441	***	9th ,,		400	7	15

12. A calamitous wreck, accompanied by serious loss of life, occurred at the close of February 1880. The S. S. Vingorla foundered and sank on her voyage from Bombay to Karachi, the commander, several officers and 64 passengers perishing with the ship. Among the missing passengers were five Post Office clerks on their way for field service in Southern Afghanistan. The mail on board was never recovered, and the department had to pay compensation for the loss of insured articles which exceeded Rs. 30,000 in value.

MONEY ORDER WORK TAKEN OVER BY THE POST OFFICE.

13. On the 1st January 1880 the management of the Indian Money Order business, both inland and foreign, was transferred from the Treasury Department to the Post Office. An account of the first three months' working of this business will be given later on.

ABOLITION OF THE SIND AND PERSIAN GULF POSTAL CIRCLE, AND CREATION OF A NEW POSTAL CIRCLE FOR CENTRAL INDIA.

14. The country known as Central India is composed of no less than 14 Native States, the postal administration of which, so far as the Imperial Post is concerned, has heretofore been entrusted to the Post Muster General of the North-Western Provinces. Situated as these States are, on the outskirts of the North-Western Provinces circle, they were both difficult of access and controlled by a local administration independent of the Government of the North-Western Provinces. A new postal circle was, therefore, created for Central India with effect from the 1st November 1879. At the same time the Sind and Persian Gulf circle was abolished, the province of Sind being transferred to the Punjab, and the Persian Gulf Offices to Bombay.

Since then the acquisition of territory by Government in Biluchistan and South Afghanistan has increased the importance of that part of the country, and it may become necessary again to form a postal circle composed of Sind, together with the newly annexed territory.

LIMITATION OF HEAD POST OFFICES.

15. The expansion of the department, and especially the accession of Money Order work, rendered a limitation necessary of the number of channels through which accounts are rendered to the Central Office of Account. This was effected by concentrating all the accounts in about 400 head offices, which alone have direct communication with the Accountant General, and by multiplying Sub-Post Offices, which render daily accounts to a neighbouring head office, and have no direct relations with the Accountant General. Prepaid correspondence can be exchanged between two sub-offices without the intervention of a head office, but unpaid articles, which represent items of account, must necessarily pass through a head office.

EARLY DELIVERY OF LETTERS IN CALCUTTA.

16. A system of partially sorting the local mail for Calcutta while in transit by train, was introduced in February 1880. By this means the distribution of prepaid correspondence at the first delivery was advanced by two hours. The number of local deliveries in Calcutta was also increased from three to four in the day.

REGISTRATION OF INLAND BOOK AND PATTERN PACKETS.

17. The registration fee for inland book and pattern packets was reduced from four annas to two annas, and the privilege of registration, irrespective of weight, was extended to such packets.

POST CARDS.

18. In July 1879 two descriptions of post-cards were introduced, viz., aff inland post-card for use within the limits of India, and a foreign post-card for circulation within the limits of the Universal Postal Union. Service post-cards, for use by Government officials within the limits of India, were also made generally available, with effect from the 1st April 1880. A few were issued before that date. It may not be without interest to compare the rates of postage levied on inland post-cards by some of the principal countries in the world. This comparison has been made in the following table:—

	Country.			Postage	rate for Inla	nd Post-cards.		Equivalent in Indian Currency.

England and Germany are the only two countries which levy an additional charge for paper and manufacture. All other countries sell their inland post-cards at the value of the stamp borne. The Indian post-card is the cheapest in the world.

NINE-PIE EMBOSSED ENVELOPE.

19. A new envelope, embossed with a nine-pie stamp, was introduced for the use of soldiers and seamen belonging to Her Majesty's ships.

INDIAN POSTAL GUIDE.

20. The price of the Postal Guide was reduced from one rupee to eight amas per copy.

INDIAN POSTAL ABSTRACT.

21. A need having been felt for the dissemination of postal information in a form both cheaper and more concise than is given in the Indian Postal Guide, the "Indian Postal Abstract" was issued in July 1879, consisting merely of a single sheet of paper, giving the postal rates in an abstract form. Later numbers were amplified into a brief summary of some of the principal postal rules. The publication is sold for one anna.

POSTAL PAYMENTS FOR CARRIAGE OF MAILS ON STATE RAILWAYS.

22. It was decided by the Government in March 1877 that the Postal Department should pay actual expenses for the carriage of mails on all State Railways, but the method of calculating these actual expenses having caused much discussion, it was not till February 1879 that a settlement was arrived at. A payment of 18 pies per vehicle per mile was fixed, in proportion to the space actually allotted to the Postal Department on its own requisition, for mails sorted in transit. Closed mails were to be charged at 1½ pies per maund per mile. These payments included the conveyance of the principal officers in the department, of all officials in the Railway Mail Service, and of all postal servants travelling in the Post Office compartment. Retrospective effect from the 1st April 1877 was given to these arrangements, which are to remain in force till the 1st April 1884.

Later again these rules were somewhat modified, the Post Office being required to pay, with effect from 1st January 1878, 4½ per cent, per annum on the original cost of vehicles built or altered on its own requisition, and to pay haulage on return vans fitted up as sorting carriages. These modified rules were rendered applicable to the East Indian Railway with effect from the 1st January 1880. 22. It was decided by the Government in March 1877 that the Postal Department should

from the 1st January 1880.

AFGHAN WAR.

23. Allusion was made in the last annual report to the war which broke out with the Amir of Cabul in November 1878, and to the strain which that war imposed on the Po tal Department. Peace was restored by the treaty of Gundamuk in May 1879, and this was

followed by the deputation of a British Ambassador to Cabul in July. But the murder of Sir Louis Cayagnari and his followers in September of that year, led to a resumption of hostilities and the prompt advance of two armies to Cabul, the one by the Khyler, the other

by the Shuturgurdun route.

24. A fresh strain was thus suddenly thrown on the Post Office. Men were summoned from various parts of India; field Post Offices were attached to each force, and opened at convenient spots as the troops advanced. A horsed cart line was established between Peshawar and Jellahabad (80 miles), with a horse post extension to Cabul (96 miles), and, at the instance of the Foreign Department, a new postal circle was created for Northern Afghanistan and placed under the charge of a specially selected Deputy Post Master General. Numerous Post Offices had also to be maintained for the military occupation in Southern Afghanistan, the post being carried under arrangements made by the local Political and Military authorities. authorities.

MILITARY TRANSPORT TRAIN.

25. A train, consisting of carts drawn by bullocks, for the transport of troops, ammunition and other military stores, was organized by Lieutenant-General Sir M. Kennedy, K.C.S.I., R.E., between Jhelum and Peshawar, a distance of 175 miles, and though this office had no concern with the service, it was placed under the direct management of the Post Master General of the Puojab and his subordinates. Great difficulties had to be contended with: carts were imported from immense distances, foot-and-mouth disease broke out among the cattle, and famine rates for grain and fodder prevailed. Yet, for some time the daily despatch of carts numbered no less than 100, and an immense quantity of military material was carried.

SECTION I .- POST OFFICES, LETTER-BOXES AND VILLAGE POSTMEN.

	No. at close		
		1879-80	Increase.
Port Offices	 4,392	4,409	17
Letter boxes	0,107	6.392	225
Village 'ostmen	 2,601	2,795	194

26. Appendix I shows for each postal circle the number of post offices and letter boxes opened and the number of village postmen entertained during the year, as compared with the total number that stood at the close of the previous year. An abstract is given on the margin. The increase is small, and especially so under the principal head, viz., that of Post Offices, a result due to strict re-

strictions imposed consequent upon financial pressure.

SECTION II.—POSTAL LINES.

27. Mails are carried in India by various methods of conveyance. The distances traversed

						TOTAL		444

All the other headings exhibit decreases, owing largely to new railway openings. But 804 miles of the decrease, shown under the head of "Runners and Boats," is due to the abolition of the river line between Mandalay and Blumo in Burmah, the Government having recalled their Residency Officers from that locality. The decrease in sea conveyance is consequent on the abolition of the Akyab and Sandoway contract line.

SECTION III.—CORRESPONDENCE.

28. In Appendix III will be found the usual correspondence returns for each postal cir-

YEAR.		Letters.	Newspapers.	Parcela.	Books and Pattern Packets.	Total.	
1879-79 1879-80		11N,500,6N9 128,567,058	10,276,900 11,251,021	1,074,262	2,023,76N 2,085,303	131.600,208 142,977,044

cle, while the results for whole of India are abridged on the margin. Under the head of letters are included post-cards, which first came into circulation on the 1st July 1879. Nearly seven millions and a half of post-cards

were sold during the nine months that they were available to the public. Letters exhibit a satisfactory increase of nearly 8½ per cent.; if post-cards be excluded, this increase will fall to about 2 per cent. The usual annual increment to be expected under the head of letters is about 3 per cent., so that the practical effect of the first nine months use of post-cards has been to deprive the department of one-third of its anticipated expansion of letters, and yet more than fully to recoup this loss by nearly trebling the number of articles delivered under the combined head of letters and post-cards. Doubtless the extreme cheapness of the post-card will soon render it popular among the poorer classes of the population when they become more accustomed to this (to them) novel method of correspondence. It may be interesting to add that the proportion of post-cards to letters has been higher in Lower Bengal

they become more accustomed to this (to them) novel method of correspondence. It may be interesting to add that the proportion of post-cards to letters has been higher in Lower Bengal and in the North-Western Provinces than in other parts of India.

29. The number of newspapers given out for delivery, which in the report for 1878-79 fell by about 6½ per cent., now exhibits a better percentage of increase than any other branch of correspondence, and presents a higher figure than has ever before been attained under that heading.

30. An analysis in greater detail, relating only to letters and post-cards, is given in

	•		1D.			Torat.

the margin. It shows a still more marked growth of paid as compaid letters : this result is largely due to the recent introduction post-eards, which cannot be sent unpaid, but is

partly attributable also to the special advantages given to prepaid correspondence, in the way of rapid delivery, to which reference has already been made (paragraph 15).

31. Both inland and foreign parcels have been included in the correspondence returns to

which reference has been made; the following statement relates exclusively to foreign parcels:-

FOREIGN PARCELS.

Parcel Exchanges. •		Total number of Parcels.		Average weight of each Parcel.			Net revenue derived by the Indian Post Office after deshection of Custom daty and sums due to Peninsular and Oriental Company.

This class of correspondence has, however, been included in the general statistics which already been dealt with in para. 28. Each heading exhibits a satisfac-tory development. Both letters and newspapers exchanged with the exchanged with the United Kingdom have increased to the extent of 6'8 per cent., while books and patterns show an expansion of no less than 24.6 per cent. A considerable decrease under this head had to be reported in 1878-79, and the unusually large development now seen is due to the improve-ment in trade. Fluctuations in trade always effect considerably postal statistics in books and patterns, for under this heading come samples of

India, and piece-goods, price currents and shipping lists from the direction of entirely on the state of trade. It is worthy of note that 17,686 post-cards were received in India from England, as compared with 38,924 despatched in the opposite direction, and this notwithstanding that post-cards were to be had during the entire year in England, while in India they were available to the public during nine months only. As explained in the report for 1878-79, the statistics of exchanges with foreign Europe are the same this year as they were last year, it having been decided by the Paris Convention that statistics should only be taken every two years.

35. Statistics concerning the working of the several Dead Letter Offices in India will be found in Appendix IV; the general result appears in the following abstract:—

	Dead Letters.			Nu	dbub.	Parc	ENTAGE,
	Dead Detters.			1878-79.	1879-80.	1878-79.	1879-80
Total number of artic	cles received in D	ead Lette	r Offices	2,865,742	2,925,764	1

38. Reference was made in the last annual report to the revised rates which came into force for the transmission of foreign correspondence via Brindisi, i.e., the reduction in the rate for letters from 6 annas to 5 annas per half-ounce. These rates were introduced from the 1st April 1879, and have naturally operated in diminishing the sale of 6-anna and 12-anna labels, and in enlarging the sale of 4-anna and 4-anna labels for single rates, and of 8-anna and 2-anna labels for double rates.

39. The steadily increasing demand for half-anna embossed envelopes calls for fresh arrangements, under which a larger supply can be obtained from the manufacturers in England. These arrangements will be stated in the report for next year.

40. Some anxiety was caused by information from the Poona Police that spurious half-anna envelopes were being sold; and a false die, together with some uncoloured impressions, was actually found. But the suspected forgeries turned out to be genuine, and it is probable that no successful imitations of the envelope have yet been produced.

41. A comparison of the proportion of revenue collected in cash with that collected in stemps during the last seven years is given below—

stamps during the last seven years is given below-

	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.	1879-80
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Total postage revenue	100	100	100	100	100	100	100
	- 18						-
Cash	31.23	31.23	30.97	30.71	29.33	26.62	24-86
Proportion derived from ordinary stamps	51.50	52.08	52.37	52.29	53.87	57.30	58.76
Proportion derived from service stamps	17-27	16.69	16.66	17.00	16.80	16.08	16.38

42. When noticing the marked increase during the last two years, in the proportion collected by the sale of ordinary stamps, care should be taken to ascribe it to its right cause. Doubtless the increasing tendency of the public to prepay correspondence has something to do with this effect. But the parcel post system has much more to say to it. Prepayment, though optional as regards ordinary inland parcels, is compulsory in the case of insured parcels, and the revenue derived from prepaid parcels of all kinds, together with the insurance fees, are credited in stamps. Thus, the introduction of the insurance system with the year 1878 naturally tended to swell stamp revenue as compared with that realised by cash. All Money Order fees are now credited in cash, and I hope soon to introduce a system under which parcel revenue of all kinds will be credited under the head of cash. Thus, the next report, and still more the succeeding one, will exhibit changes in the proportions between stamp and cash revenue

SECTION IV. DISTRICT POSTS.

43. It is customary to repeat the explanation given in previous annual reports to the effect that the District Post originated in the need for maintaining the means of official communication between the head-quarters of each district and the police and revenue stations in the interior. Funds for this purpose are supplied in some provinces by local cesses, in others by Imperial grants; and the management is conducted by the agency of the local officers of the Imperial Post working under the direction of the local Government.

44. Appendix No. VII is a statement showing the correspondence exchanged between the Imperial and District Post in each postal circle. The usual abstract is given below; but the figures are not wholly reliable, owing to the different systems followed in different localities, and the absence of any single office of account or control— -135554

NATIVE STATES.

45. The relations of the Imperial Post with Native States are the reverse of satisfactory. 45. The relations of the Imperial Post with Native States are the reverse of satisfactory. Some Native States have been allowed to develop postal organisations of a distinct and independent character, with special local postage stamps of their own; others possess such organisations with no local postage stamps. In some places the delivery of correspondence, proceeding from the Imperial Post, is effected by a distributing agency independent of this department; in other places this agency is subject to Imperial Post control; while sometimes, again, both descriptions of distributing agencies are employed. There exists an arrangement under which the Imperial Post is subsidised for the delivery of correspondence, and there are some localities in Nativa territory which are destitute of any postal organisation, and where letters cannot be in Native territory which are destitute of any postal organisation, and where letters cannot be delivered at all. Nor is diversity of method the sole difficulty that has to be met. Beyond the limits of this department, information on postal matters can hardly be obtained. Native States issue no Postal Guide, print no lists of post offices, and publish no postal matter for the instruction of the public. Postal information is not available. It is not known whether a letter can be delivered or not. Not only is pre-payment to destination in many cases impossible, but correspondence is subject on delivery to arbitrary and unknown charges. Registration is often impossible. Post-cards are unknown, and the inhabitants of Native States, which

oppose Imperial Post extension, are debarred from the benefits of the Money Order, Insurance and Value-Payable system, and other facilities furnished by the Imperial Post to the public.

46. Restriction of correspondence must be the natural consequence of this diversity of system, or absence of system; and the only real remedy lies in the gradual extinction of all lead years are accessionally and their supersession by the Imperial Post. local post organisations and their supersession by the Imperial Post. Such a measure must entail great expense for several years, but uniformity of postage rates, rules and conditions would result, and the cost involved would doubtless ultimately be more than covered by in-

creased revenue.

SECTION V .- MONEY ORDERS.

47. Allusion has already been made to the transfer of the Indian Money Order business from the management of the Treasury Department to that of the Post Office, with effect from the 1st January 1880. The reasons which led to this transfer were the more extensive agency at the command of the Post Office, the greater accessibility of its offices to the public, and the fact that the office hours of the Post Office are fixed with greater reference to the convenience of the public, while the close days or holidays in the Post Office are comparatively few

48. A radical change of system, as regards inland money orders, accompanied this transfer. Under the old system the trouble, risk, and expense of obtaining an order and sending it to the payee devolved on the remitter. Under the new system the action of the remitter is confined to the writing of an application, the Post Office undertaking to pay the money to the payee, obtain his acknowledgment and deliver it to the remitter. Again, a money order, instead of running for a year, now lapses at the close of the calendar month after that of issue; but it is payable, under charge of a second commission, within the two next calendar months.

49. The scale of commission charged for a money order amounts to about one per cent.; its maximum value is Rs. 150, and the same remitter is not allowed to send in one day money orders for a sum exceeding Rs. 600 in the argregate, drawn on the same office or payable to

orders for a sum exceeding Rs. 600 in the aggregate, drawn on the same office or payable to

50. At the outset an outery was raised at the trouble imposed on the recipient of numerous simultaneously received money orders in the matter of signature. This difficulty was overcome by the substitution of lists for separate documents, and the outery ceased.

51. One immediate effect of the change was the substitution of 5,090 Post Offices of issue

and payment for the former number of 321 treasuries.

52. Statistics giving the working of the first three months of the new Inland Money Order system are given below. Foreign money orders have been excluded from these figures.

	Монти,		Number of Money Orders,	Value of Money Orders issued.	Commission realised.
	1880.			Rs.	Rs.
January February March	984 648 646 648	101 847 114 844	60,799 76,812 98,617	19,01,978 23,62,357 31,93,034	22,978 28,279 37,810

53. A comparison of the results attained in March 1880 with those produced under the former system will show that the business has already more than quadrupled in extent, while evidence appears of a still more extensive development which the next year's report will exhibit. Number of Value of Commission

	Money Orders,	issued.	reminents.
		Rs.	Rs.

SECTION VI.-INSURANCE AND VALUE-PAYABLE SYSTEMS.

55. Last year's report contained some account of the origin and introduction of the Insurance system. In India the Post Office has ever been a favourite agency for the transmission of valuables. Although Post Masters were prohibited from knowingly receiving such articles, the restriction was of small practical good. Unmistakable evidence of the costly character of contents used sometimes to be afforded by the weight and appearance of an articles. character of contents used sometimes to be afforded by the weight and appearance of an article, yet the Post Office could not challenge it unless the sender, by writing or word of mouth, declared the contents to be of intrinsic value. Temptation to dishonesty thus became serious—a danger which was largely enhanced by the introduction of currency notes. It was then determined to recognise what could not be prevented by permitting the public to transmit valuables through the post under a system of insurance. Coin, bullion, precious stones and jewels may now be sent in insured letters and parcels if the contents and full value be declared and a fee paid, in addition to postage, of about ‡ per cent., the department accepting pecuniary responsibility in the event of loss.

56. This system acquired a rapid popularity. It was largely resorted to by the natives

56. This system acquired a rapid popularity. It was largely resorted to by the natives of the country, and specially by the poorer classes, when absent from their homes, for purposes of remittance. Small parcels of rupees were made up by domestic servants, native soldiers, and others, and committed to the post for transmission to distant members of their families. It proved a convenience also in the case of payments to native ladies, who could not, under the customs of the country, appear in public to cash an order or a draft.
